COMPUTERVIEW

Meeting the industrial relations challenge

AT last the storm clouds surrounding the British economy have shown signs of letting through a glint of sunlight. But over the next few months there will be a number of industrial relations tangles still to be unravelled, with computers and computer staff likely to play a crucial role in some of the most knotty problems.

Except for the computer manufacturing industry, the computer community has managed, over the last 15 years, to emerge, grow and prosper in a sufficiently dynamic and expanding environment, that it has not yet had to face up to some of the industrial relations challenges that are intrinsic to the working life in other fields.

Two elements are now bringing the computer world into the mainstream of industrial relations life — the effects of the first two stages of the current government pay policies which have closed differentials between manual and white collar workers; and the growing realisation by unions of the power of the computer as a bargaining weapon.

The action by assistant air traffic controllers at West Drayton has been focused around the use of its computer system and the Society of Civil and Public Servants has publicly indicated that government computer installations would be high on its priority list if it decides to take industrial action in its current round of negotiations (CW, October 20).

Whatever the outcome of these particular disputes, these actions and others that will follow, could have one significant side effect: raising the public consciousness of the importance

of computers and forcing politicians to realise that computers are now a vital national resource which needs to be integrated fully into national policies.

In this type of user action, computers are not central to the particular industrial relations problem but are being used as a bargaining tool in a wider dispute.

Industrial relations within the computer community itself poses some novel issues.

The hardware manufacturing arm of the computer community is in essentially the same position as other manufacturing industries. But for the rest — the service industry, the programmers, operators, analysts and DP managers — industrial relations is still a relatively virgin territory, with many dissimilarities from the rest of the nation's economic scene.

For a start, there is a severe shortage of staff and not rising unemployment. Just look at all the jobs in this week's issue (pages 17 to 47).

The computer community has also tended to be a nomadic one. There are often great differences between the general rates for a job by the standards of other computer professionals with the job rates being paid within user organisations for equivalent staff levels.

This can lead to anomalies between the pay of DP staff and the rest of the organisation; or it can mean that the DP staff fall into line with the users' rates and get out of step with the rest of the computer industry.

The computer community is still relatively young, prosperous and ill-organised. Unions like ASTMS and APEX, which

aim to represent computer staff, face the same problems as the BCS in carving out a separate niche for the computer community, as many computer staff will become members of user unions, such as the SPCS or National Union of Bank Employees.

There has, therefore, been little co-ordinated exchange of industrial relations experience, so on the issue of operators' shift allowances (see Op Spot, page 11).

But there are signs that, as wage differentials and living standards have been eroded, computer staff are ceasing to see themselves as a breed apart.

It is a challenge, however, that must not be shirked by management or staff. There will be no clear-cut solutions, but a lot of bargaining and learning on the road to the resolving of the paradox in which the DP community must realise its unity as a technological and economic force but whose aim should be to lose its identity within the user organisations that it ultimately serves.

Ten years ago...

COMPUTER WEEKLY
OCTOBER 26, 1967

AT Slesob CII exhibited, for the first time, its 10010 high-power computer, but French "Informatique" firms were hard to find among the 800 exhibitors... IBM's trading figures for the first nine months showed gross income up by \$887 million to \$3,748 million compared with 1966, while Burroughs' earnings were up 20% on those for the corresponding period of 1966... "Peking Radio" announced the "successful production of an advanced transistorised computer" by the Science Academy of the People's Republic of China... The French retail store chain, Berthier-Savoy, formed a computer-oriented subsidiary, a "calcul ordinaire" to work out horoscopes... "Instant translation" from Vietnamese to English was provided on an RCA Spectre 70/45 system intended for use by the US army

Threat to bubble memory launched

From Keith Jones in Munich

A CHEAPER alternative to bubble memory is now available from BASF in the form of a domain bit memory module, the DOT 48K. Word processing and microprocessor systems are seen as two big application areas.

The 48K bit DOT 48K has a lower capacity than the latest bubble memory chips and a much longer average access time, 61.5 milliseconds. But at a maximum cost of \$20 per module, or 40 millicents per bit, it is considerably cheaper than bubble memory for which BASF estimates a cost of 250 millicents/bit.

BASF says that the DOT module can cost as little as \$8, or 15 millicents per bit, if ordered in quantity, and OEM contracts are already being negotiated with manufacturers of equipment like portable data collection kit.

The DOT module comes in a flat plastic housing measuring 75 x 75 x 3 millimetres and

weighing 35 grams. Inside the housing is a magnetic film holding four 12K bit shift register channels. Each of these takes the form of a flat spiral on the surface of the film.

The four channels are concentric and the operation of the module is 4 bit parallel. Data is fed in/written at the inside of the spirals and fed out/read at the periphery.

Each bit in a channel takes the form of a magnetic domain and the domains are moved round the spiral by a copper conductor lying on top of the film.

The conductor is folded into hundreds of spokes, forming what looks like a flower with hundreds of very thin petals. As the current passes these generate alternating magnetic fields which make the domains jump from one petal to the next.

BASF has been working on domain bit memory technology for several years (CW, October 24, 1974) and co-operated with

the US firm, Cambridge Memories, until about a year ago when Cambridge ran into serious financial difficulties (CW, August 19, 1976).

BASF is already supplying sample quantities of its DOT memory to prospective customers and plans to be in full production at its magnetic media plant at Wollstat, near Strasbourg, by the end of next year.

A second source agreement has been signed with Crouzet, the French electronics firm which already manufactures DOT memories specifically for military and aerospace applications.

Two other important application areas seen by BASF for the DOT 48K are as a buffer in telex machines in place of paper tape and in process control, where the DOT could be used to store control parameters.

Get out of that... Joseph Woch, the UK Othello champion makes a decisive move in an Othello game against a Hewlett-Packard 8830 at Aston University. Woch won 80-14 in a game lasting 70 minutes. His verdict: "The computer played better than I expected." The program was written in Basic by Peter Cooley, who teaches programming in the university's mechanical engineering department. While playing, the 8830 recorded the moves and Cooley will use the information to help the machine put up a better fight next time.

UK house scores in Canada

A SMALL UK software house has landed a significant contract to design software for a major Canadian company's mini-computer network. Xoren, of Ealing, beat at least two North American companies which had put in higher bids for the same project.

The gaining of the contract was due largely to two visits to Canada, this summer and last, by managing director John Jarvis, combining a holiday with an effort to drum up business. The competitiveness of Xoren's bid is illustrated by the fact that the price eventually put on the contract was £28,000. Competitors are reported to have bid as high as £128,000.

The network involves Digital Equipment PDP-11s, running under RSX-11M. The identity of the client and the precise application have not been disclosed, but the system monitors alarm points, and the Xoren software will drive VDUs. The software will initially be developed on Xoren's own PDP-11/40, before transfer to Canada.

Minister praises BCS work for disabled

COMPUTING is ideally suited to the talents of the disabled, as programming is 80 per cent brain work and only 10 per cent physical activity. And once employed the disabled are anxious to give satisfaction to a far greater degree than the able-bodied.

These points were made by Lorraine King, chairman of the British Computer Society's specialist group for the disabled, at a BCS seminar aimed at dispelling fears of employing the disabled.

These long-term benefits, she said, offset early problems such as the need to build ramps,

widen doors and possibly modify work routines.

She called on other professional bodies to take the same kind of interest in the disabled that the BCS did.

The BCS' involvement was also praised by John Gram, the Under-Secretary of State at the Department of Employment, with special responsibility for the employment of the disabled.

"I am impressed by the way you have explored this area to the benefit not only of disabled people but also to the benefit of their employers and the whole computing community," he said.

Honeywell profits boost

THIRD quarter figures from Honeywell show a big boost in both turnover and profits compared with the same period last year.

Profit at \$36 million (£21 million) was up almost 45% once an extraordinary item is taken out of the 1976 figure, on turnover of \$711 million (£404 million), up 14%. The profit figure was reduced by \$7.3 million (£4 million) set aside for increases in stock and "a more

conservative method of revenue recognition on service contracts."

Honeywell Information Systems accounted for just under half of the company's business, with Honeywell Controls making up the remainder. On the computer side, worldwide rental and service turnover for computers rose 15.5% in the quarter, and Honeywell said that sales revenues were also up.

Your chance to join the board

STUNG by criticism that thousands of public service appointments are in the gift of Ministers and tend to be offered only to their cronies, the Department of Industry has decided to invite members of the public to apply for two £1,000 a year part-time appointments to the Post Office Board of Governors. Usage of Post Office services will be preferred, so anybody

who is involved in data communication and believes the Post Office is insufficiently responsive to the needs of the computer industry should have a fair chance of being accepted.

Applications have to be in by the end of the month and should be addressed to Mr J. E. M. Basil, assistant secretary, Department of Industry, Waterloo Bridge House, London.

INTERRUPT...

THERE was once a tough, rugged military minicomputer which was designed to control a tank. It did clever things like keeping the tank's gun pointing in one direction while the tank was moving in another.

During demonstrations, everything worked perfectly and the operators became very adept at manipulating the switches on the control panel. The trouble only began when the computer was installed in the tank.

For, after the soldiers had crawled into the tank, heavy army boots first. It was found that the mini no longer had any control switches. They had all been snapped off by the boots.

The moral is: Do not put the boot into considerations of the installation environment and human interface (or: interfoot) during systems design.

Submitted by Peter Williams, of London, who wins the weekly £5

Exciting things happen with Prime Computer

With 24 hour working and 20 tons of rock removed with every shovelful, Taylor Woodrow need their Prime computer to optimise open cast excavation — profitably. If your business has requirements as diverse as structural analysis, vehicle route planning and financial project control, Prime has a computer in its range to suit.

Prime Computer (UK) Limited, The Melton Centre, St Peter's Street, Bedford MK40 2PN and The Coach House, 173 Sheen Lane, London SW14 4BN
Telephone Bedford 0234 88121 or London 01-876 4915

PRIME

VISITORS to the International Business Show which ended last week could well have been tempted to stray. An international mining conference and exhibition was being held in the adjacent halls at the new Birmingham National Exhibition Centre.

Apart from the fascination of equipment, the length of several technology corridors, there were probably more computing applications in action than next door.

Among the assorted office furniture displays and copying machines, the IBS show was, in contrast, notably free from such computing diversions. No doubt if a survey had been attempted, the results would have given coffee machine vendors a clear head start over computing systems.

The contrast between busi-

ness and industry was much in evidence. The mining complex was very much involved in data transmissions, computerised control systems, remote controlled automation sensors and transducers.

Meanwhile any transducing at the IBS was limited to the collective gathering of show-stand girls and competitions.

Visiting DPMs are obviously expected to spend their time avidly completing entry forms rather than evaluating between computer equipment. Providing one could estimate the time it takes to clean the windows of Buckingham Palace, the weight of a Japanese motor bike (plus desk), pick up "Miss Office Style" and complete a jig-saw puzzle, visitors could muster an assortment of prizes including holidays, photocopying machines plus a car and a motor bike.

Just how many entered the car contest purely to recommend the misused distribution of sales literature could well have been the subject of a further competition.

This fringe theme — all too typical of such sessions — was possibly deliberate, the organisers hoping to compensate for what seemed to me, the sparseness of both computer exhibits and visitors. Although many large computing organisations had obviously decided to give the show the cold shoulder, ICL tried to redeem the situation by

constricting an elaborate citadel which, in typical computer methodology, was difficult to gain access to or subsequently leave.

In the mining halls next door, all was very much down to, to mention below, earth. Systems were designed to serve users, management information being regarded almost as a fringe benefit. Whether the users were pit face miners or surface shunters, computing technology was present to assist them, not their horses.

Measures which could improve safety factors were much in demand, a four second signal warning application being considered more beneficial than a four-week production turnover schedule.

It does seem that the engineers have got their priorities right.

For the rest of us, DP is all too often a new to us information and the end user being normally the company directors or management.

Our industry is far too occupied with the State of the Art. If the current exhibitions are any guide, the Art is in a pretty poor state. There appears to be an over-preponderance of professors on the DP scene. It is time, perhaps, to return to the basics. To borrow the DPMA slogan, a "practical" dose of computing could be good for us all.

DOWNTIME

Finding a name for DPeople

WELL, what do you call a "computer person" (or as some US journals would have us say, "DPer")? Several readers responded to my invitation to coin a neonym (Downtime, October 13).

Andy Mardo, of Reading, offered (his own words) some suggestions "both quaint and barmy". As most of the practitioners (no that won't do, either) in the computer industry that I've met or worked with qualify under one or both counts, I give his list, with his comments: Electrodatalogist — sounds like someone trying to escape from a bomb shelter; Datolain — would probably describe all manner of systems; Systophile — who on earth loves systems, let alone files; MDPI or MDPP — for member of the DP industry or profession.

More seriously, he avers of Compro that "it looks good, it sounds good, and by golly, it's the name of a segment in George III, described elsewhere as the King of Operating Systems."

From M. D. Hutton, comes Com-Jadpu, comes Com-

puterist; Computertech-nician (Computech for short, he says, but the term is already arrogated by the eponymous firm); Informaticien (on the French model), and Informaticist. He adds Computerbug; Computologist; Computist; Compologist; Comp (useful for headlines, that); Compist and Adpist (not as in news); Adper and Computar.

B. G. Jones, of St Davids, Pembrokeshire, suggests rather late in the day that the term Computer could be reserved for people, as "there is in one sense no such thing as a piece of hardware called a computer". His list of possibilities includes Computant; Informatician; Computician; Computor; Computist; Computerman (oh, dear — no women?); Computect and Computecr.

Somehow, I don't think the last word has been said on the matter, though I would like to add my own contribution: Logonaut, from logos (word, system, order) and -naut (one who steers a ship, spacecraft or the like). Seema logical.

Black holography

FOR those readers intrigued by the Isaac Asimov interview on robotics (Futureview, October 13), there is more of this fascinating author to be enjoyed in his latest book, "The Collapsing Universe: The Story of Black Holes".

Published by Hutchinsons (£3.95), it takes the reader down to the world of atomic and sub-atomic particles and then up into space and to one of the most extreme states of matter known in the universe — Black Holes.

Black Holes come into existence when matter, in the form of stars, collapses

inwards upon itself under the power of gravitation. Once a certain threshold is reached nothing can stop the collapse and the sun becomes superdense. Nothing, not even light, can escape and therefore the sun is now invisible.

Asimov's style in writing about complex subjects is remarkable for its simplicity without oversimplification. In this book he continues the pattern and makes some startling suggestions — one of which is that we are now living in a Black Hole. The worry is that he could be right.

Labelled for despatch

THE plastic labels which officedoms in all its forms bedecked its millions are a familiar sight. I'm never sure of these badges of authority are there to tell the wearer who he or she is, to tell us who they are, or to tell their employers keep a tally on them.

The reason given out for this plastic labelling is, of course, security, but with their bright colours and personal portraits, I think it is another branch of the ever-spreading greetings card market.

Among the many variations that one sees

hanging on official chests and breasts, one used by IBM, have an interesting "built-in" obsolescence feature. Over the picture of the cardholder, IBM states very firmly, "Expires 1980", or, I suppose, whatever other date the company's management plan decrees.

THE story that should have hit the headlines, "Naked Jodelleita of Olivetti press visit". It all happened in Helsinki earlier this month when the Italian and systems company led on a press tour as a prelude to showing off a big banking order. Just a case of getting down to the dirty facts,

In his first Mythodology column (CW, August 25), Tom Gilb asserted his belief that there is no systematic proof that structured programming can improve productivity. Paul Coyle, who has many years of practical involvement in programming projects, strongly disagrees with Gilb's attitude. In this article, Coyle gives his own personal view of why his experiences have convinced him of the practical importance of strict programming standards.

Bewitched bebugged and bewildered

The results are outstanding. We write programs faster, they are operational sooner, they seldom fail drastically and when they do, they are easier to amend

I AM sure that Tom Gilb will not be offended if I call him an academic. I was once an academic and learned the value of the Scientific Method, which involved the investigation of hypotheses, experimentation, analysis of results and the ensuing cycle of prediction, experimentation, analysis of results, reformulation of hypotheses and so on.

Very few of us are clever enough to be able to continue a life of academic bliss and have to use some native cunning as we do possess in persuading an employer that he should pay us. I am employed by a large company with a fair-sized computer installation, 23 programmers and over 3,000 operational programs. Under such circumstances such scientific theory becomes redundant in attempting to adjust to the real world.

Because human beings are notoriously unpredictable, experiments are usually performed first on animals, and one of the reasons for the unpredictable human is that he likes to control his own conditions in his own way. In matters where conformity is desirable to produce results of which no individual would be capable on his own, some set of rules of behaviour is usually developed.

Most people concerned with computing would agree that some form of programming standards is desirable. Curs are comprehensive, having evolved over several years, and we do ask programmers to stick to them. It may sound like rules, regulations and restrictions, but it is not as bad as that.

If any individual is unable to solve a problem within the framework of the standards, then one of three things may happen. First, problems may not be tackled in the best way, so redesigning the solution may be desirable. Second, a previously unsuspected condition may have to be incorporated in the standards, which are not immutable. Third, the problem may genuinely be a "one-off" or may have reached such a stage that to conform would require chaotic changes to the rest of the system. In this case such patches as are necessary are applied, well sealed with copious annotation describing why standard procedures could not be used.

Consequently our standards may be described as democratic, and in any democracy there are always individuals who disagree with some of the standards but are prepared to conform to the sake of the whole principle. The consequence of consistently breaking the standards of society is either "corrective treatment", stardom or politics. This recognises that if standards break down through constant abuse, then the society for which those standards were

meant to operate will also begin to break down.

If I push the analogy, rightly or wrongly, to apply to programming standards it would seem that continual divergence from the standards would cause an eventual breakdown in the computer system, caused by obscurities, misunderstanding, use of undesirable features, unavailability and so on.

Education is a well proven method of ensuring that standards are known and kept, and that individuals are aware of the proper steps to take should they disagree with any of them. Thus we have a comprehensive training and education scheme, and never assume the dictatorial attitude of saying simply, "These are the standards, use them or else!"

The results are astounding. We write new systems faster, they are operational sooner, they seldom fail drastically and when they do, they are easier to amend. I must disappoint Tom Gilb by adding that I am unable to offer a proof of this to the nth decimal place, but then we would be in a sorry state if all subjective statements were dismissed as valueless for want of a few figures.

This is especially true when others, including some of our users, agree in their subjective views.

Incredulous readers who are now thinking that all they have to do is knock together a few rules of the "Thou shalt prefix all working storage accumulator fields with 'WA'" format and all will be well, are perfectly right to be incredulous, because there is also a section of our standards which deals with design techniques — and it is in this area that the greatest improvements have taken place.

We use structured programming and design techniques, it's as simple as that. It should not be controversial!

Unfortunately, it is people such as Tom Gilb, who dismisses the advantage of structured programming simply because nobody has yet performed detailed measurements, who make the subject controversial. In recent computer press contributions, Tom Gilb has suggested that annotated code offers at least as many advantages as structured programming, and that correct modular design is "better than" structured programming; and no doubt he has done experiments to prove it. But, are not these objections a little too specific to be meaningful?

All that should ever be claimed is that structured programming and other techniques, if taught and applied correctly, can improve the performance of computer systems. The pity is that Gilb has implied that annotated code, modular design, structured programming and other

There is absolutely no reason why a program in our installation should not be fully documented, incorporate annotated source code, use data names, etc according to standards, use our structured design techniques (based on data structure — not to be confused with nebulous terms such as "Function Decomposition") — and even be modularised (separately compiled modules, that is), all at the same time.

Also, if you happen to think it's a good idea, there is no reason why such a program cannot be bebugged. Bebugging — the deliberate insertion of bugs into a program while the time taken to locate them is measured — is not, in my opinion, a new, all-singing, all-dancing technique, but merely an additional aid.

If people could clear their minds of ridiculous quibblings over whether GO TO should be allowed in structured code and regard the process of program design, coding testing and maintenance as one problem, then it should be apparent that we would be falling our employers, our users and, ultimately, ourselves if we did not incorporate all relevant aids into the normal sequence of events for producing an operational system.

Having, perhaps, stated the obvious, I believe that not all so-called aids are relevant and I think bebugging fell into this class. I'm sure that the vast majority of applications programmers would agree. I work in an open plan office, with other programmers in a friendly atmosphere where we write programs which are now on the machine downstairs and if they ever go wrong, we sort them out. All fairly standard stuff, but (as with many users), enhancements, bugs with some of the older programs, education, training, hardware and software

upgrades and changes keep us very busy.

Who, under such conditions, could consider approaching a programmer who is working to the usual deadline of "last week", and asking them to solve deliberately planted bugs? There are, of course debugging aids which, used sensibly, can make solvable all but the most obscure bugs, which may require detailed knowledge of other parts of the system or of the software in use. The techniques of solving some bugs are even outlined in our standards. As a result, any bug which cannot be identified within an arbitrary time limit is likely to require the assistance of a systems analyst or software programmer anyway. How does that fit in with bebugging?

I am sure it will have crossed other people's minds that, with very few changes, bebugging could become an instrument for measuring not the maintainability of a program, but the competency of the programmer to whom the exercise is given. An egoless approach to programming is all very well, but bebugging now offers a means of destroying it entirely!

As a training exercise in the use of core dumps, symbolic debugging and other trace facilities, planted bugs have always been used, but to take a bebugged program to a colleague and give him or her 30 minutes to beat the clock, seems to be a pointless academic exercise.

In conclusion, I would say that arguments about programming techniques are often needlessly invented by those wishing to "sell" a new technique, and my special objection is that such techniques are often exploded by the "aaleaman" into the answer to all programming problems. Instead of just another aid which could make life a little easier for the rest of us.

John Kavanagh reports on the 2900 Club

VME/B improving rapidly, say users

THE VME/B operating system on the big ICL 2900 mainframes still has problems but is improving rapidly. That was the verdict of users at last week's 2900 Club meeting.

And according to one important user, the BOC bureau subsidiary Datasolve, most of the problems are irritations rather than major holdups to work.

One exception to this is the weakness of the communications facilities of the system, Mike Gardner, manager of Datasolve's 2970 centre, said this was his major problem. "The facilities are there and they almost and sometimes do work, but the system can't support enough terminals."

Datasolve's 2970 supports 12 terminals. Gardner thought this figure must be at least doubled and ought to be over 30. Apart from this major problem there were irritations such as a lack of performance measurement and timing tools and a minor usability problem. "These aren't big problems," said Gardner, "but they could be to a new installation."

Gardner pointed out that between July and September the mean time between software failures had been 10 hours. But the true situation was less gloomy: "If you count genuine software failures the mean time

between failures increases to 25 hours."

"The difference between the two figures is accounted for by the fact that VME/B can't cope with minor hardware problems. We expect a lot of these problems to be solved in the next release."

Gardner added that at each break in running the company lost 20 minutes, as it took five minutes to dump the system, five minutes to load again and 10 minutes to re-run previous work.

On the "plus" side the breaks had never had any effect on the file store or catalogue.

Gardner was also happy with ICL's conversion aids, which he described as extremely good and very reliable. And benchmarks which showed that the 2970 was slightly faster than a Univac 1106 and more cost effective than a big 1900. This meant that the performance was starting to look encouraging.

Datasolve's relatively happy experience of VME/B is partly due to the company's early start in preparing for the 2970.

It started two years before the machine was delivered, with operating staff being trained and given practical experience at ICL's Bracknell centre.

Gardner described this training process as the most significant reason for what he

called Datasolve's flying start with VME/B.

Other tips were passed on by Gardner: "You owe it to yourselves to use the best staff you've got on the project. After all, you'll expect the machine to last 10 or 15 years. Make sure you have clear procedure. You need a well disciplined approach. And we found that you get further and faster if you work with ICL rather than against."

Getting a flying start could save a user £150,000 in the first six months: "It costs £800,000 to run a 2970. If you start from scratch you start getting full value for money after six months."

"If you're well prepared you can get some value immediately and save around £150,000. We had customers on our machine a week after it was delivered."

Three years on...

IT is almost three years to the day since ICL launched its 2900 range of mainframes. Last week a record number of members — 313 — were at a meeting of the 2900 Club, a body of users, potential users and consultants who is independent both of ICL and of the ICL Computer Users' Association.

So how is the 2900 getting on after three years? Members heard that the main bones of contention, the VME/B and VME/K operating systems, are improving rapidly although the major weaknesses with both lie in the limited communications facilities yet available.

A SAVAGE attack on the fact that ICL did not answer the specific criticisms of the VME/K and VME/B operating systems came from the 2900 Club chairman Stuart Rutherford in closing the meeting.

He said that ICL speakers had not addressed themselves to the subject at all and that this was "quite unacceptable"

Wanted: experienced workers for France

A FIRM vote of confidence in ICL at the 2900 Club meeting came from a French user, Serge Quelin, ICL company secretary of Méthodes et Informatique, a French bureau specialising in services for insurance companies and department stores.

The bureau got a 1901 in 1971, moved to a 1902 and then a 1904A and has now ordered a 2980 which will be installed in 1979.

Quelin's praise of ICL was based partly on the performance of the 1900s and partly on the way the company operates in France where, with 350 2903s

and 120 1900s installed, it is the third biggest supplier by number of machines and the sixth in value.

"In France the whole ICL team, including management, take part in contract negotiations," said Quelin. "Unlike its competitors ICL shows no obvious aggression and so negotiations are done in the best spirit."

Quelin pointed to an advantage which his company has over users in the UK: "A company our size has all the advantages in dealing with a supplier like ICL, which is not dominant in the market."

One problem, however, was finding staff trained on ICL equipment, and this was one reason why Quelin had chosen to run the VME/K operating system on the 2960 rather than VME/B, which is more difficult to use.

He added, "UK recruitment companies should look seriously to France, for there are shortages, especially at ICL stations."

Tally grows in Europe

The fruits of the spreading Tally tree are there for anyone to take. Better technology and better performance, lower prices and less maintenance, a range of printers to match the market needs of the whole continent. A factory in Austria and sales and service support in 16 countries. Branches everywhere, you might say.

Varsity man's praise for staff and hardware

A catalogue of complaints about the VME/K operating system, offset by praise for ICL staff and hardware, was given at the 2900 Club meeting by Dr Brian Spratt, director of the computing laboratory at Kent University, Canterbury, an early 2980 installation.

And, like VME/B on the bigger systems, VME/K's biggest failing was its communications capability. In January the university was running 12 on eight terminals. The number was now 12 or 13, but Dr Spratt said he would like to be able to run 64 or more. "It's in ICL's own commercial interest," he said.

Other shortcomings last January held up the introduction of reasonable user service by six months, said Dr Spratt.

They included inadequate Fortran and Algol compilers, no file store accounting, non-contiguous printer output, no break facilities on interactive working, which meant that if a job went into a loop it could not be interrupted, and no macros in job control language, meaning that all job control statements had to be input by the user for each job.

Current shortcomings included the fact that VME/K took too much memory and disc storage; the tendency of the system to

produce a dump rather than a simple message if a job control statement was wrong; too much patching, which was a stop backwards and did not lead to a stable operating system; and the fact that the communications controller could not support asynchronous devices.

ICL solved this last problem by supplying a Teletype concentrator based on a 7502 terminal with 16 channels. "This was nice, but expensive," said Dr Spratt, emphasizing that universities did not have money to throw around these days.

On the plus side the hardware was good and improving, the ICL project team gave enormous help and called regular meetings, although the university felt that the support from the rest of the company was patchy.

Dr Spratt was now looking for better throughput and reliability, and "vastly improved usability": the system is supposed to be for real users, not virtual ones. He was also interested in more compatibility between VME/B and VME/K, as he hoped to use the 2980 being installed at Oxford. University as back-up.

Dr Spratt's final verdict was, "VME/K is improving, but there's still a long way to go."

Personal accountability is now alive and well

"IT was impossible to get fired at ICL three or four years ago. But now personal accountability is alive and well." So said Bruce Stewart, director of ICL's systems programming division, in a talk at the 2900 Club meeting which painted a picture of a new, efficient, ICL, with the last duck image long dead.

Stewart said that every system programmer was now an identifiable link in a chain.

Simple changes which had also had great effects on the quality of the end product included the

surging that all 2900 development work was actually done on a 2900 computer and writing new software as a part of existing systems rather than writing it in isolation and then trying to integrate afterwards.

Changes such as these were reflected in the fact that when Stewart joined ICL two years ago it took 45 minutes to run a single user test shot with VME/B. It now took two or three minutes. And the mean time between failures was now

A range of printers to satisfy all your computer output needs. Outstanding technology at each speed means optimum reliability. Simplicity of design means round the clock performance — without routine maintenance.

Tally printers plug in to almost any mini computer or data terminal. Teletype, built-in and fast — anywhere in Europe. Tell us your application requirements, we'll tell you which printer will meet it.

MICHIE'S PRIVATEVIEW

What if the machines become inscrutable....?

I HAVE previously noted the emergence of computer programs able to outperform experts in selected intellectual tasks where the machine approach displays a style quite different from the human's. A small but telling example from chess came to light at the Toronto IFIP in August.

As mentioned in Chesslab, International Masters Berliner and Day were invited to demonstrate their skill against a move-perfect program for a particularly tricky sub-game of chess, the King-Queen-King-Rook ending (CQ, October 6).

Except for a few special starting positions the Queen's side has a theoretical win against the Rook's side, and a strong Master can ordinarily be expected to win against any human opposition. Yet Berliner and Day found themselves unable to defeat the machine however many times they tried.

The most upsetting feature, they complained, was their opponent's bizarre and counter-intuitive style, which bore no trace of the simplifying concepts which give shape to human play.

The following issues merit consideration. Strategies evidently exist which are machine-refutable but not human-refutable. If already in chess, why not in air traffic control, power grid design or military robotics? Should we let even unintelligent machines become that smart? What are the long-term omens for man-machine communication if the partners do not share conceptual structures or any common style of apprehending and analysing problems?

For tasks of middling-to-low complexity, these are not real issues. We have already lived with them for a long time without ill effects. A number

cruncher equipped with the last word in variety and efficiency of numerical routines has little in common with the conceptualisations of a human calculating prodigy such as the Edinburgh mathematician Alexander Aitken.

He would have found intercourse with a Cyber 178 concerning factorisation and the extraction of roots almost as mysterious and unsatisfying as Berliner and Day found their experience of the KQKR program.

True, he would have been able to gain an understanding of the numerical algorithms themselves, whereas the chess-masters had nothing to understand, only a four million-position lookup table.

High-speed arithmetic is an intellectual utility which does not demand that we understand or talk to it. The same goes for packages of all sorts which permeate the computing world as convenient "black boxes".

Suppose that a PERT package schedules the job better than a human project director. How much does he feel to pry into its detailed workings or to argue with it, so long as it is doing what he wants?

Man-machine understanding, however, acquires the highest importance in certain applications which are now on the move. The relevance is not to "black box" programs but to those for which an "open box" mode is mandatory. The fact that this latter kind are still few is a measure of the extent to which information processing has yet to penetrate into the more complex and responsible levels of human affairs.

"Complex" and "responsible" correspond to two separate reasons why we may demand that a program share its conceptual structures with the human user. The problem

area may be as complex that man-machine intellectual partnership is needed for best progress.

An increasing variety of chemistry packages fall into this category. It is of interest that the US Government recently announced the setting up of a National Resource for Computation in Chemistry.

The other reason for "open box" use derives from the responsibility of the task. In air traffic control we do not care how smart the programs get. They can be as superhuman as they like. But we would care if they became inscrutable.

Various medical "expert systems" also come to mind. Without the facility to probe and question the program's reasoning, Stanford's clinical pathologists would ignore the Mycin program, however skilled it may be in bacteriological identification and drug prescription. And they would be quite right.

At Edinburgh we study how to build a common conceptual frame for man and machine. Using chess and game knowledge we are developing facilities for easy transfer of strategies from man to machine and back.

Such studies need to be amplified in a variety of branches of knowledge so that our culture may be enriched, not eroded, by the advance of the machines. Urgent investigation in the coming decade should be devoted to the "conceptual interface".

A program is not "Intelligent" in any useful sense unless it can show a convincing grasp of how the problem looks, not just to a 10 mips device, but to the computationally limited instrument within my skull.

Donald Michie

Graphic Data System refined to aid VLSI designers

ADVANCES in hardware technology can set severe problems for designers who must, in turn, call upon the resources of computer-aided design systems to keep pace with them. Calma, one of the specialists in CAD, has taken specific steps in enhancement of its circuit design aids to cater for the hardware designers' progress into very large scale integration, VLSI, technology.

A primary problem is that of resolution. VLSI circuitry features may be only 0.1 microns wide, while whole circuits could be as much as 1 cm square. This requires a resolution of 1 in 100,000, more than 16-bit plotting co-ordinates can handle. Calma, in its new Graphic Data System II, has accordingly upgraded its 16-bit co-ordinates to 32 bits.

On a large and elaborate circuit, the designer is all faced with the speed and space problems resulting from the handling of a vast amount of data. Aimed at minimising these problems, GDS-II has been augmented

system to provide faster access to required data than conventional files. Data Compression algorithms help to reduce space. The system's new display handling software is also designed to alleviate a bottleneck in the process of interactive design, by passing graphics data to and from the screen more quickly.

A multiprogramming operating system enables up to six displays to be handled simultaneously, while the system is also performing background tasks such as plotting, or putting graphical dots on magnetic tape.

However, there is only one arrangement which results in two of the points being completely enclosed when the five lines are drawn in (with the Pentagonar points are outlined — the Magic Pentagonar Hye).

There are several ways to arrange 10 points so that five lines of four points in a line are formed. And when those five lines are pencilled in, various interesting shapes are outlined — the Magic Pentagonar Hye.

SOFTWARE FILE

Facing problems of rapid growth

RAPID expansion in a company's business frequently leads to more complex information requirements and hence more involved DP solutions. A good illustration of this growth at work is provided by container transport company OCL.

Having already ventured into teleprocessing, the company is now in the course of both extending its telecommunications facilities and transferring its information to database organisation.

The forthcoming progression to database is a different story. OCL has decided to use Cullinane's IDMS and will probably be the first UK installation to use the database in teleprocessing mode.

The decision to go to an independent for database software emphasises again one of the frequently criticised shortcomings of IBM's own OL/I — its rigidly hierarchical organisation. OCL's need to access information through several different keys meant that a network data organisation was the only answer, without duplicating data items, said project manager Phil Ingram.

OCL's main UK container terminal, at Tilbury, is serviced by IBM equipment, which has progressed from a 360/30 in 1967 to a 370/158 at present. The company is currently considering acquiring another 158, and linking the two under MVS — replacing its present DOS/VS environment. With the emergence of the 3030 series, however, one of these machines is being considered as a possible alternative.

Teleprocessing was first mooted in 1971, as a faster method of communicating information about containers to and from regional UK and European offices. Previously, this has been managed on punched tape. Today, there are over 100 IBM 3270 terminals at Leeds, Liverpool, Manchester, Paris, Bremen, Rotterdam and other offices.

TP access is managed through IBM's CICS/VS software. While admitting that there were probably other more efficient rivals, OCL representatives pointed out that most of the

progress in the independents had occurred after the TP decision had been made — for example, the new releases of Altergo's Shadow and TSI's TaskMaster. At that time, they said, CICS was the most attractive product on the market.

The forthcoming progression to database is a different story. OCL has decided to use Cullinane's IDMS and will probably be the first UK installation to use the database in teleprocessing mode.

The decision to go to an independent for database software emphasises again one of the frequently criticised shortcomings of IBM's own OL/I — its rigidly hierarchical organisation. OCL's need to access information through several different keys meant that a network data organisation was the only answer, without duplicating data items, said project manager Phil Ingram.

OCL has also recognised the need for a data dictionary, and is using Arthur Andersen's Lexicon product.

The conversion to MVS is expected to be complete by March, but, prior to this, in January, the company plans to implement VM/370, at least temporarily. With this, the database implementation and the second mainframe, the DP department's load is increasing.

Accordingly, the company is recruiting new DP staff intensively, and hopes eventually to have some 280 personnel.

Other information needs include historical details of

previous cargoes stored in each container. "Obviously we can't ship food in a container which has been used for chemicals," said OCL.

The company leases several of its containers from other companies, and details of these, their location and the money owing on them must also be maintained. These complex requirements make clear the advantage which will be gained by implementing a network database.

Most of the information is produced regularly in the course of normal business, but ad hoc online inquiry will become an increasingly important facet of the computer system, aided by CICS and IDMS, OCL predicts.

The present CICS-IDMS interface is not as streamlined as might be wished, admitted database administrator Karen Foster. A new release of the interface from Cullinane, is however, imminent. OCL, like most UK installations of IBM IDMS, acquired the database through Selcon.

OCL has also recognised the need for a data dictionary, and is using Arthur Andersen's Lexicon product.

The conversion to MVS is expected to be complete by March, but, prior to this, in January, the company plans to implement VM/370, at least temporarily. With this, the database implementation and the second mainframe, the DP department's load is increasing.

Accordingly, the company is recruiting new DP staff intensively, and hopes eventually to have some 280 personnel.

THE official announcement of Release 5 of IBM's VM/370 operating system has relieved several worries for IBM users. The most significant reassurances given in the announcement, at the latest meeting of Sens, the Share European Association user group, was that VM/370 will be supported on the current models of the 3030 series and, presumably, on future models.

Users have become increasingly apprehensive that IBM was seeking to push the users of its new large machines irrevocably towards MVS (CW, October 20).

The assurance of continuing VM support indicates that, despite heavy promotion of MVS, IBM now sees VM also as a system with a long future.

This appears to represent a change of heart on IBM's part, said a Share representative. The driving force was undoubtedly the increasing popularity of the system. "IBM, like any other

How Release 5 stops worries

business organisation, has adjusted its view in the face of customer enthusiasm."

A number of "system extensions" have been made to VM, as part of Release 5. Perhaps the most significant of these is an improvement in restart and recovery for IMS users under VM.

If the control program which passed data between IMS and VM had to be restarted this previously involved substantial rebuilding of the IMS database. A "storage preservation" extension is said to enable the database to recover from such an interruption substantially automatically.

Other system extensions allow two virtual machines under

VM to share control of a 3270 terminal. Accounting of VM activity can now be directed to a disc rather than a card punch.

The Sens meeting also gave some valuable insight into possible IBM trends in hardware and software organisation in general. A talk on this subject by D. Norris, of IBM Poughkeepsie was, however, accompanied by the usual provision that his views were personal, and did not necessarily represent company policy.

Norris predicted that current trends in memory technology could lead to a future configuration consisting of several processors surrounding such a memory.

Because of its existing philosophy of concealing the real organisation of the memory from the user, who works with virtual addresses, MVS would ease such a change, Norris said.

Aid to format layout

A COMPANION product for the Videob online programming aid (CW, October 13) has been produced by Gresham Computer Services, of Southampton. Videob provides for the interactive generation of visual display formats on ICL 1900 series and 2803 hardware, condensation and storage of the format on a file and integration with a Cobol program.

The format is defined by inputting the fields directly on to the screen, exactly as they will appear in the final program. Spaces for fields to be input in the screen during the program

are delimited with square brackets. Separate Cobol formats are then generated for the output and reply descriptions of the screen.

Users of Videob can place their screen formats on the Videob library. Videob, says Gresham, not only eases the task of online programmers; it also enables the programmer to show his planned screen in advance to the department which will be using the VDUs. Alterations can then be suggested, and the screen designed co-operatively.

The French connection

AN interactive graphics package, already well-known on ICL equipment, has been released by SEL Computers for its own SEL 32 series of minis.

Known as Euclid, the package is controlled through basic geometrical descriptions of

three-dimensional objects, and so is claimed to be applicable to a wide variety of applications.

Euclid was developed in France, and was brought to the UK by DA Computer Services (CW, June 11, 1973).

PROGRAMMER NOTES

How do you loop and DO ... ?

JUDGING from previous columns (Programmer Notes, July 28 and August 25), readers are particularly adept at suggesting improvements in programming languages, as well as offering well-founded criticism of the features of current languages.

This week, an interesting structure has come to our notice in a language for microprocessors, and this seems a good jumping-off point for a discussion on methods of handling that universal program construct, the "loop" or "DO" statement.

The lowest-level way of implementing such a structure is, of course, to place at the end of the repeated block of statements a conditional GOTO referring to the beginning of the block.

This is very much frowned upon nowadays, especially as most high-level languages have specialised DO statements. The DO statement usually includes the condition for the looping to terminate.

This approach is avoided by Zilog in its PL/Z language (CW, October 13). The language indicates that a block of statements is to be repeated merely by placing DO at the

start of the block and OD at the end.

Termination is provided by including anywhere in the block a conditional EXIT statement, which transfers control to the statement following the OD.

If such a statement is inadvertently omitted, the program will continue to loop infinitely. Zilog contends that such a structure gives the programmer more responsibility.

Do our readers want this kind of responsibility thrust upon them, or would you prefer your programming languages to be foolproof?

The more conventional DO statement, with controls included here, nevertheless, a number of different forms. Is the choice between stepping a variable, DO ... WHILE and DO ... UNTIL merely a matter of taste, or do our readers have any clear reasons for preferring one to the others?

There are several methods of indicating the end of the DO loop, by statement reference, BEGIN ... END, or Basic's NEXT. Structured languages seem to favour the odd word OD. Again are there any clear preferences? Will we ever be rid of the GOTO?

Dynamic memory strategy

DETAILS have now been obtained of the strategy of the dynamic memory management which is the chief feature of Interdata's Dynamic OS/32 MT operating system (Software File, October 20).

Memory allocation is dependent both on the initial memory requirement of the task and on user and task-directed emendment. Unlike Data General's AOS, it does not use periodic heuristic evaluation of resource requirements.

Memory is allocated to tasks on a first-come-first-served basis, as they are loaded. When memory is full, further tasks are allocated hypothetical memory rolled out onto disc. The future rolling in of tasks is controlled by their priority relative to a previously specified "roll eligibility". This is changed by the operator, or by another task.

As a further memory-saving technique, tasks are segmented into "pure" and "impure" portions. Pure parts contain only the code areas which are changed during execution. Hence this re-entrant, and only one copy need be in memory, although several users may be active.

SyFA to emulate 3270 terminal

AN emulator has been produced by Computer Automation, enabling its SyFA terminal to behave as an IBM 3270 terminal whenever the operator wishes while, at other times, it processes its normal workload.

The SyFA can thus be integrated into an IBM network for both online and RJE access.

As many as 15 of the SyFA's maximum 24 screens may be operated concurrently in 3270 mode. The RJE access is an option, and requires slight modification to IBM software. No such

modification is required for the main online access capability. CA has already gained an impressive pilot installation for the emulator, at the DnW Chemical Company's Michigan Division. The SyFA's use in a wide variety of applications from order entry to management to pollution monitoring.

Projects, involving single ship or a tackles the mechanical constraints on transporting a file of structural properties calculations for discharge.

Maritime aids released

A PAIR of programs designed to aid the shipping industry and clients involved in maritime transport have been released by Glasgow marine Consulting Engineers V&V.

PROFIT FROM YOUR COMPUTER WASTE
By sending your obsolete, old or broken computer equipment to us, you can make a profit. We will buy your equipment at a price well above scrap value. We will then sell it to a customer who will pay a premium for it. We will then pay you the difference between the price we paid you and the price we sold it to. This is a simple and easy way to make a profit from your computer waste.

Integrity is the target

IN his letter calling for "joiners" (CW, October 6), Neville Taylor, chairman of the Data Processing Management Association, perhaps rather unwisely used the description "practitioners" in his short list of suitable candidates for membership.

It should be made manifestly clear that the designation "Incorporated Data Processing Practitioner" is legally protected by the Institute of Data Processing for use by its own professional members, and IDP has made the "practitioner" its own particular field of recruitment since its inception in 1966.

DEREK BRADLEY
Secretary,

Institute of
Data Processing

Misleading comparison

YOUR article, "US government forecast of sales trends abroad" (CW, September 8), contains a warning about the use of market share figures. To emphasise the point you compare the US Commerce Department figures with those from IDC.

You state that the Commerce Department figures have IBM and ICL level pegging "in the region of 30 to 35% each", whereas you quote the IDC figures released earlier in the year as giving IBM 47.2% and ICL 26.5%.

It should be pointed out that the figures that you quote from the Commerce Department relate to the market in terms of numbers of installed systems and those quoted from IDC are in terms of installed base values. Similar figures from IDC released at the same time give IBM 33.0% and ICL 32.2% in terms of installed units.

Not quite a hydra-headed ombudsman, the British Computer Society's professional panel advisory service is concerned with maintaining codes of practice — end the

reconciliation of the great British public with the impact of the computer (usually unfortunate) on their lives. Report by JOHN KAVANAGH.

Trouble shooters for the BCS...

EVERY day the British Computer Society gets queries and pleas for help from members, non-members in the computer industry and from the general public. Most of the technical, membership and education queries are dealt with by BCS staff or by the chairman of the specialist groups, but the more unusual queries are passed on to the BCS's professional panel advisory service.

The panel and its advisory service were formed 18 months ago when the BCS decided it needed a panel of members to act as a sort of ombudsman, investigating complaints from the public about computer systems (CW, May 1, 1975).

The advisory service has not really turned out to be an ombudsman, as most of the 35

software there and in a flash it's round 18,000 users.

The advisory service also has to help members who feel that adherence to the BCS codes of conduct and practice put them in conflict with their unions and employers.

Dick Sizer, from the Royal Aircraft Establishment at Farnborough, and Waller's vice-chairman, feels strongly on this: "In all cases of conflict with unions and management the member must decide for himself according to the code of the BCS. If he has difficulties because of this he should turn to the BCS. And the BCS should be prepared to back him in the courts, if it feels he acted honestly according to the codes. We are looking at a number of insurance schemes to cover these cases."

"One problem here is that computing is a young industry, and its members can be put under pressure. You don't get such pressures in established professions: after all, you wouldn't put pressure on an accountant or a solicitor. Management and unions must eventually recognise that they can't pressure members of the computing profession."

Ignorance of computers is behind many of the cases which come before the advisory service. "The Daily Express ran a silly 'computer booby' again" story and we wrote to the journalist to try and educate him a little," said Waller. "We got a letter from a ratepayer complaining about the borough council wasting money on computing, so we got the data processing manager to give the person a tour of the installation."

"There's still great public ignorance," said Sizer. "If you complain about a bank error the clerk says, 'It's the computer, you know.'"

"The computer is the scapegoat for a plastic society," said Waller. "If there were no computers we'd have to invent another scapegoat." Sizer commented, "In the old days the bank clerk would say, 'It's a head office, you know.'"

As well as supporting members in matters of conflict, the advisory service investigates breaches of the code of conduct by members. The members talk to the person involved and may make recommendations to the BCS president. Breaches of the code are recognised as serious: "No organisation can be seen to be professional until it has a real disciplinary procedure," said Sizer.

The other members of the advisory service are Anthony Chandor, who has just joined Inspec Data Systems from the National Computing Centre; David Coan from the NCC;

Barry Jackson from Hawker Siddeley; Joe Kenny, a consultant; Phillip Maylor, who runs the TOPS training scheme

WALLER: "We wrote to the journalist to try and educate him a little..."

at the Training Service Agency; Steve Shirley, managing director of F International; and Miriam Stephenson, contracts manager at the Post Office's National Data Processing Service, who gives the advisory service legal advice.

All the members are on relevant BCS committees or boards, such as those dealing with privacy, education and the codes of conduct and practice.

The advisory service reports to the professional panel, which also oversees the code of conduct and code of practice committees. The professional panel, the communications panel and the technical panel all report to the technical board. The panels deal with much of the administrative matters, thus leaving the board to look at matters of policy.

Welsh schools' essay competition

SECONDARY school children in the Welsh county of Dyfed are being invited to write essays on a competition organised by Bryn Jones, who runs the county's educational computing centre.

The competition has attracted wide support from the computer industry, as shown by donations of prizes of £50 by Computer Weekly, £25 by Post Office Telecommunications, a trophy by IBM, seven calculators by Texas Instruments and several books of computer games by Digital Equipment.

The competition is being judged by representatives from Post Office Telecommunications, the Central Electricity Generating Board and the Western Mail.

There will be a winners' dinner and an award ceremony. The competition is aimed at giving all pupils an equal chance, whatever their age and how long they have been using computers.

Closing date for entries is March 13, 1978, and the prizes will be made next May. Further details can be found from Bryn Jones on 04578 3121.

Gobbledegook

WHEN I saw that Computer Weekly was to have articles on bubble memories and CCD memories I felt that at last I would be able to find out how it was done (CW, September 29). However, disappointment! Two mathematicians and two physicists have read and re-read the article on bubble memories and we still cannot sort it out.

The article on CCD memories was uncharitably described by a colleague as "gobbledegook". Some of the text is on a par with the worst jargon which the US can offer (e.g. paragraph 9.1 have heard some papers and articles described as intelligible only to

those who do not have to read them. These two fall into this category.

Can I conclude with a plea? When you publish these elements which can be very informative, have a "non-floor worker" read through them first. They fail completely if they can be understood only by a small minority.

Royal finger on the button—and Swift is under way

A ROYAL finger on a golden button formally inaugurated the Swift interbank funds transfer network in Brussels last week. The finger was that of Prince Albert of Belgium, brother of King Baudouin; the golden button, on a VDU attached to the

Swift network, triggered a fraternal greeting to each of the 430 banks in 14 European countries and in the US which are attached to the network.

"I, Albert, Prince of Belgium," said the message, "declares the Swift system offi-

cially open in the hope that this forward step in international communication will reflect itself in growing international understanding and co-operation throughout your membership and the world."

The Prince welcomed Swift to Brussels

"not only as a company and an employer but as a symbol of international co-operation. Swift enables small commercial banks to compete with the giant international banks, and anything which stimulates competition is all to the good."

SID suppliers' plans for next generation

THE three approved Swift Interface Device, SID, suppliers revealed their plans for the next generation of hardware and software at the inauguration ceremonies.

Burroughs is to meet criticisms of the throughput capacity of the B7 SID by rewriting the interface software in the MPL 2 language of the B80-800-1800 compatible range of small systems, and hopes to get it approved by Swift in January. This will give users dramatically enhanced flexibility with a five to one power range of systems from which to choose.

Users will also be able to use B80s as terminals to B800 or B1800 SIDs and, provided the software operates satisfactorily, should enable the company to consolidate its position as leading SID supplier with 182 banks using the B7 SID.

ICL, which became an approved supplier when it acquired Singer's International operation, has a base of only 20 users to work from. It hopes that now the uncertainty over the future of the ICL 1500 SID is removed, it will get a much larger share of the next group of banks to join the network.

ICL's plans for the next generation are as radical as Burroughs, but less well-defined. Current intentions are to develop a new modular SID combining elements from both the 1500 and the 7502 terminal systems.

ICL claims that although it has a small number of users, they do include the largest current user of the network, Société Générale de Belgique, which is currently generating about 10% of the total traffic on Swift.

The bank has two ICL SIDs, which are 1503 terminal systems adapted to be interrupt driven. The standard 1500 has only one programming level.

General Automation says that about 150 banks are using its SPC 0/65 SID and that its first priority is to get its software approved by Swift. It hopes that the process will be completed by the end of the year. It does not have any plans for a second generation at present, but is completing a portfolio of banking software, notably a foreign exchange package, which will run on any GA machine and be available to Swift and non-Swift users.

Leading non-approved interface supplier is IBM, which is estimated to have 20 users of its Direct Swift Link package on System 370 mainframes, and 25 to 30 users of the System 7 interface device.

Heading the list of specialist suppliers offering a Swift solution is UK systems house Arbat. Arbat has written Swift interface software to run under its AIMS operating system on DEC PDP-11 machines, and has aroused considerable interest among US banks dissatisfied

with the preferred solutions (CW, June 30).

Arbat meets criticisms that Swift is excessively conservative of machine capacity under its AIMS system by pointing out that Swift has to have absolute priority whatever the solution chosen. Arbat generally recommends customers to have one processor dedicated to Swift with a second running the other banking applications available under AIMS.

A Swift spokesman gave weight to Arbat's contention by pointing out Swift messages could equally monopolise an

IBM 370/158 using the Direct Swift Link package.

For the future, Arbat is looking forward to the imminent launch from DEC of a 32-bit mini which will run the PDP-11 and hence Arbat's own software. The systems house is working on enhanced software designed to provide high efficiency with high volume Swift message traffic.

Datsab has a couple of users for its D5 Swift interface, and NCR and DEC are preparing Swift solutions. DEC is said to be working on a system to run under RSX-11.

One of the three approved Swift interface devices, the GA SPC 0/65, is in use here. GA says that 43 out of the 47 Swift member banks in Australia use the GA SID, as do all the Finnish banks, and 30 to 40 per cent of those in Sweden.

the impact of electronics

A major international conference organised by Electronics Weekly

Hilton Hotel, Park Lane, London, Thursday, December 8th, 1977

An opportunity to discover how developments in electronics will bring far-reaching changes to industry, commerce, leisure and society.

This major international conference is an attempt to create an awareness of what is happening in terms of the social and economic effects of the electronics revolution, which can only be minimised and turned to good account if all those concerned understand what is involved.

In a series of papers, leading figures in electronics from Britain and other countries will explain that while new technology may be disruptive, this can be lessened if long-term plans based on sound knowledge are made.

This conference can be your first step towards acquiring this knowledge—the key to choosing the right way ahead.

Subjects and speakers will include:

The Impact of Electronics—Past, Present and Future, by Jack Alderson (Managing Director of Mullard Ltd., Chairman of the Electronic Component Industry Federation, and member of Electronics EDC).

The Impact of New Technology in Telecommunications, by Kenneth Corfield (Deputy Chairman and Managing Director of Standard Telephone and Cables Ltd., and Senior Officer of ITT in the United Kingdom).

The Microprocessor in the Home, by Dr Steve Rorie (Managing Director of General Instrument Microelectronics Ltd since 1971 and has many years experience of the Semiconductor Industry).

The Microcomputer in Industry and Commerce, by Alan d'Apparey, CBE, (Chairman of Computer Analysts and Programmers Ltd).

The Impact of Microelectronics on Employment, by Dr Alfred Prommel (Vice President of Siemens AG, West Germany, and head of sales and marketing in the company's computing group).

Lord Orr-Ewing, CBE, C.B., (Chairman of Ultra Electronics Ltd), Sir Iwan Madock, CBE, FRS (Deputy Chairman of the National Electronics Council) and Lord Thomson (Chairman of Type of Cambridge Ltd) have all agreed to chair the session.

The concluding Open Forum will feature a panel of experts which will include William C. Pittenger (Executive Vice President, research and engineering, RCA Corporation USA), Carl Hield (Chairman and Managing Director of Mullard Industries UK), Derek Roberts (Managing Director of Planar Microsystems Division) and Frank Clarke (Managing Director, Planar Electronics, Cambridge, UK, and chairman of EDC).

The registration fee is £25 (plus £5 for lunch). The fee includes a copy of the conference programme and a copy of the book "The Impact of Electronics" published by Electronics Weekly.

Please complete in CANTEAS and send to: Conference Administrator, ITC Business and Industrial Training Ltd., Surrey House, The Valley Way, Surrey, Surrey SK9 4QQ. Telephone 01-833 8011. Please enclose a recent photograph for the book "The Impact of Electronics" published by Electronics Weekly. The fee is £25 plus £5 VAT (14.50 per delegate).

Tandy sets up first shop to sell minis off the counter

ANOTHER established US minicomputer manufacturer is moving towards the personal computing field, even if only indirectly. Computer Automation LSI 4/10 machines are now available over the counter in Fort Worth, Texas, from the first computer shop to be opened by Tandy Computers, a new division of the Tandy Corporation.

An initial order for five LSI 4/10s has been placed by Tandy with Computer Automation, and Tandy has been appointed CAI's sole retail outlet in the US. It is the only way that the computer will be available, as such, in single quantities, as CAI applies a minimum order quantity of five units. Tandy's retail price has been set at \$785.

The new division of Tandy is

something of an experiment for the corporation, best known for its worldwide chain of Hi-Fi retail outlets. This sole outlet of Tandy Computers will perhaps be followed by others in the US if it is successful, and future plans incorporate a strong possibility of an extension of the division into the UK and Europe.

To back the LSI 4/10 product line, Tandy will also be selling its own TRS-80 microcomputer system (CW, August 26) plus equipment from various personal computing suppliers, such as, Intel and Polymorphic Systems.

The company is also working on a packaged small business system based on the LSI 4/10 and a range of software for both the professional and hobby user is currently being developed.

Introduced earlier this year (CW, June 2), the LSI 4/10 is the smallest machine in Computer Automation's LSI 4 range. It is a 16-bit machine that is available as a "naked" board.

As an OEM item, it competes directly with the Data General Micro Nova and the Digital Equipment LSI-11 machines. Through Tandy, it is now in competition with the LSI-11 again, as this forms the heart of the HI1 microcomputer from Heathkit (CW, July 21). Ironically, Heathkit is also best known for its work in Hi-Fi.

State of the mini-micro art surveyed

NEW users entering the microcomputer field have an overriding need for information on the beast, not only in terms of what is available, but also in terms of a general overview of its relevance and importance to their particular area of operations. With the pace of technological development in this area marching on unabated, even the experienced user of micros needs to stand back occasionally, so as to see the wood for the trees.

It is, therefore, interesting to see the latest book in the series "Current Aspects of Computer Technology", just published by Input Two-Nine.

Compiled and edited by Alan Simpson, the book is entitled "Microcomputers: The mini-micro revolution", and it brings together not only the current state of play in the process of technological development, but also an examination of its implications.

The industry view of the micro and where it is going is supplied by various companies operating in this field. There are contributions from the micro manufacturers, Intel and Zilog, while the software side is represented by Triad Computing Systems, Zeus-Hermes, Systime and CAP Microsoft. And to round things off, the view from either end of the microcomputer systems market is provided by Compelc and Phillips Data Systems. Altogether, the eight provide an overview of the route the micro is following, and some of the problems that confront it.

To balance the industry view, the book also includes an examination of some of the social implications that the development of the micro has brought, and will bring in the future. These include the impact of the micro on the DP professional and mainframe development; the problems of training people for the growing computer field — especially at school level; and on how we should learn to make computers work for us rather than the other way round.

It is the third in a series of nine books, with future issues covering such subjects as small business systems; the future computerised society; data communications and security.

GIM offers 16-bit micro at 8-bit price

A LOW cost version of its CP 1800, 16-bit microprocessor has been introduced by General Instrument Microelectronics that is price competitive with 8-bit devices.

Aimed primarily at the growing consumer market for micros, the new CP1800 device is available, in quantities of 100, at a price of £275 each. Software compatible with the CP1500, it operates from a lower, 1.5MHz clock rate.

The device's 87 instruction set offers extensive interrupt capabilities and an address capacity of up to 65K words of program and data memory.

Radio command puts Voyager 2 on course

TWIN US space probes, Voyager 1 and 2 are now collecting scientific data about interplanetary space on their long journey to outer planets Jupiter and Saturn, despite some problems with both craft.

Voyager 2, launched before Voyager 1, as it will take a longer route to the planets, first showed signs of trouble when a boom carrying scientific instruments failed to extend completely. This was followed by unexpected changes in the craft's attitude, a problem traced back to programming errors.

Each Voyager has three computers controlling main and sub-systems. Mission software can be re-programmed via radio command, and this technique

was used to correct the attitude of Voyager 2.

Radio re-programming is a powerful tool in multi-planet missions of this nature as ground based controllers can design software around equipment failures to meet changing circumstances.

Most development work on the computers was carried out by General Electric, SCI Systems, Teledyne Microelectronics and Lockheed.

Voyager 1 will make its closest approach to Jupiter on March 5, 1979, before moving on to Saturn to be followed about four months later by Voyager 2, making its closest approach to Jupiter on July 8, 1979.

Government faith in 2900s

THE government was looking for more commitment from ICL in a number of areas as it firmly believed in the company's long-term future, said Roy Atkinson, director of the government's Central Computer Agency when speaking to the 2900 Club.

He added that ICL's profitability and export record and the fact that the government has 14 large 2900s and another 2970s on order are

all testimonies to the company's viability.

The government wanted new developments at the top of the 2900 range and further development in communications. And it looked for satisfactory performance from the VME/B and VME/K operating systems. Further developments must involve a two pronged, co-operative approach from users and from ICL.

More support for Pascal

SUPPORT for Pascal as a real time language is growing.

The Swedish defence procurement agency, FMV, has specified a Pascal-based language as its standard for real time software development. Last month, the US Department of Defence also decided to go

down the Pascal road for its Ironman project (CW, September 29).

The Swedish decision was taken over a year ago and UK consultancy SPI has now been sub-contracted by L. M. Ericsson to design the new Pascal-based language.

MoD policy appointment

A NEW assistant under-secretary concerned with computer policy has been appointed at the Ministry of Defence. He is Max Phillips, who previously dealt with public expenditure at the Treasury and before that was involved in management services at the Atomic Energy Authority at Aldermaston.

Phillips will be responsible for policy planning and for the financing and staffing of computer installations and projects for the ministry, the largest government user of computers. He replaces John Sabatini, who has taken another post in the ministry as part of a reshuffle.

Maintenance ruling anger

WHILE NCR in the US is provoking angry reaction from users and computer brokers with a ruling that maintenance will not necessarily be continued on second-hand equipment, the UK office has indicated that no change is expected in this country.

If an NCR user in the UK sells

his equipment to another user, NCR will examine the machine and give a quote for maintenance. The price would clearly depend on age and condition of the machine, said a spokesman. NCR would not refuse to maintain it, though the user would consider it uneconomic.

November conference

THE study group on computers in survey analysis is to hold a two-day conference on November 11 and 12 at the City University, London, on data

structures for survey analysis.

The cost for the two days is £21, including lunch, and the conference will provide an in-depth and comprehensive review of the topic.

Further information from John Utting, National Computer Bureau, 8 Wakley St, London EC1V 7QE.

Amdahl record

THIRD quarter sales figures for Amdahl Corp were a record at \$48,471,000, almost double last year's third quarter figure of \$28 million, and 3% up on the second quarter of 1977. Profits in the third quarter were \$13 million pre-tax, but as Amdahl has now used up all the tax credits it amassed during its start-up phase, after-tax profit is \$8.4 million.

Cloud over IBS

A BLACK cloud hung over the final day of an otherwise successful International Business Show when a burst water main cut power supplies to the National Exhibition Centre, Birmingham. With a record 88,404 visitors, this was 88% more than of the 1976 British Efficiency Exhibition at Olympia.

Fine gift

THE £100 fine levied by City of York City EC on its skipper, Terry Yorath will help to pay for a X-ray body scanner for the hospital (CW, October 20). The hospital (CW, October 20) this season that any club fine would go towards the £250,000 appeal fund for a second stage at Walsgrave Hospital.

Stake doubled

THE stake in Plessey by Racal Electronics has been doubled with the purchase of further shares in the company. The stake in Plessey has now reached 25%.

Welfare benefits volume

FULL technical and user documentation of the computerised welfare benefits information system developed by Edinburgh University, Inverclyde District Council and IBM (CW, April 22, 1976) is now available in a single volume.

The book includes background on UK welfare benefits, a detailed technical description of the programs, the costs and manpower associated with running the system and a guide for users.

The documentation is available for a small handling charge from David du Feu, Department of Social Administration, Edinburgh University, 7 Buccleuch Place, Edinburgh 8.

TV group uses NCR 280 ECRs

AN NCR point-of-sale system is being installed throughout the retail outlets of Vallances, the Leeds-based television and hi-fi specialists.

Validated at £200,000 the system will incorporate 45 NCR 280 electronic sales registers equipped with OCR scanners for data collection. Applications include hire purchase, short term credit, deposits, and TV rentals.

Data is collected on cassette and sent from the branches to the headquarters in Bramley, Leeds, for processing at the end of each day.

Supermarket order

SUPERMARKET group F. J. Walls has placed an order for 110 DACAP Series 325 point-of-sale terminals from Transaction Data Systems.

The terminals are to operate on a stand-alone basis initially, and each will be equipped with between five and six department totals, several media keys for differing forms of payment, and security features specially designed for Walls.

Woolworth deal

F. W. WOOLWORTH has awarded the maintenance contract for its pilot stock control system project to Computer Field Maintenance, of Hitchin.

The first of the five systems in the project is due to be delivered to the Manchester store by Toltec Data later this year. Based on a Computer Automation processor, the system utilises a dual density floppy disc drive sub-system.

Sugar network

A DISTRIBUTED processing system has been ordered from Cara Data Processing of Dublin, by the Irish Sugar Company.

The £250,000 order includes 18 Datapoint 110 intelligent terminals and 10 Centronics printers. These will be installed at Irish Sugar factories in Carlow, Mullow, Thurles, Tuam, Midleton and Limerick, with three Datapoint 1100s, two printers and two magnetic tape units at the head office in Dublin.

Service centre

AN engineering centre has been established at Hutton Cross by Systma Maintenance and Services to extend the company's activities into the refurbishing field. The centre will be able to overhaul any type of computer equipment with an average turnaround time of one week.

Ribbon price cut

An average price-cut of 20% has been announced by Stylis graphic Services of Radlett, Herts, for its complete range of Diablo Printer ribbon cassettes.

Putting system terms into user language

A DP manager recently described an end user problem which is not uncommon. The users were bothering his analysts with frequent queries about the new retrieval system. The interest was welcome — but also disturbing. There was a "User Guide" and the user phone calls took analysts away from their jobs. Good though contacts were for user relations, the drain on analyst time was high.

The system was an in-house showpiece. It met a long standing need. The user guide —

In this second article of his series on DP/user communications, Nigel Laurie (right), outlines some of the problems that can arise, even when considerable care has been taken to provide information. The problem in this case was a difference in approach, the users saw the system from their point of view while the "guide book" had been produced by systems people and gave "systems" answers.

the "Blue Book" — was impracticable. It was complete. It had been a labour of love. It weighed in at three and a half pounds. And it was of very little use.

When the DP manager had his top analyst study the problem he learnt the following:

● The Blue Book was well written. Layout was simple, the

style direct and the graphics helpful and clear. Jargon was defied and the table of contents explained the book's structure well.

● The Blue Book stored data but not information. Users agreed it was complete and up to date. But they argued it did not answer their questions. They said it was written from the designer's viewpoint — not the user's. Since it was not useful, they did not use it.

● User queries were always put in user terms. They arose "in flight". They tended to be forward-looking, reflecting the users' keen drive to exploit the system more fully. And since users knew only what they wanted and not how to achieve it, they did not express their needs in system terms.

● The Blue Book put everything in system terms. It did not tie

system functions to user needs but left it to users to make the connections. This they could do only by reading through the book until they found the functions which seemed to fit. Since it is always easier to ask an expert you know, users naturally phoned an analyst. Hence the constant interruptions.

Clearly DP communication skills were not lacking. User readiness to put queries confirmed the good relations. The problem of usability arose because the initial communication objective had been unsound. It had been to give users a "complete account" of the system. DP staff now recognised that they should have set out to give a "user oriented" account of the system, one which presented the system in terms users could relate to their tasks.

But should the Blue Book be written again? The system would soon be growing to meet the needs and rewriting the whole book would be an immense task. The DP manager decided to exploit his strengths

Instead of struggling with a weak area.

Noting that users liked to talk over their systems needs — and that this helped analysts grasp user problems — he determined to manage the personal communication.

He set up an inquiry desk, staffed by a system expert with acknowledged user handling skills. This freed other analysts from interruption. It put the communication flair of one analyst in a place where it could do most for DP and for the users. And it meant that user queries could be analysed without the need for several analysts to compare hastily scribbled notes.

As of September there's just one way to reach the booming computer markets of Western Europe...

COMPUTER PRODUCTS

COMPUTER PRODUCTS

A COMPUTER WEEKLY PUBLICATION

Have you seen Computer Products International?

50,000 computer people throughout Europe have seen this new publication. And they like what they see.

Produced by the same team which has made Computer Weekly International Europe's most widely read computer newspaper, COMPUTER PRODUCTS INTERNATIONAL brings news of the latest hardware and software products, whatever their country of origin, to an audience of computer executives throughout Europe.

At least 50% of every issue consists of product information, but there is also a News Review, an OEM section, and a product survey — in October, floppy disc drives.

The first issue, published in September has generated more than 2,500 enquiries so far, and they're still rolling in.

Now the October issue is out, so why not find out whether you qualify for readership? Just fill in the coupon and return it to:

COMPUTER PRODUCTS INTERNATIONAL
Room 126, Dorset House
Stamford Street, London SE1 1 England

I should like to receive Computer Products International ten times a year free of charge. Please send me a descriptive brochure and a readership application card.

I am responsible for specifying and/or purchasing computer equipment in my organisation.

Chairman of Wright Air Conditioning, George Wright is a trained engineer, and has been in the refrigeration and air conditioning industry since 1951. For the past 13 years he has specialised in the design of air conditioning equipment for computer rooms, and in 1973 he formed his present company. It offers a nationwide design, contracting and installation service, with centres in Glasgow, Birmingham and London.

Making modern office fit for staff

By George Wright

TODAY'S modern office is not complete without the aid of the business machine. This varies from the simplest electric typewriter to the complex mainframe computer. Neither the typewriter nor the mainframe computer create problems in the normal office environment, because the heat generated by the typewriter is small, and the large computer will already be served by a purpose-designed environmental control system, and other external services.

However, such items as visual display units, terminals, card

punches, keytape encoders, micro, mini and small business systems do give off considerable heat, and especially when used in large numbers, can and do give rise to environmental problems. The style of equipment mentioned above can operate reliably in normal office conditions and it is not, therefore, usual to make special provision for environmental needs.

For the reasonable comfort of operating staff, the room temperature should be between 68°F and 75°F, with the humidity level between 40% and 60%.

Most of the business machines which do not require special conditions vary in their operational limits, but could well lose reliability if the temperature range goes beyond the bounds of 60°F to 90°F, or humidities of 35% and 60%. It is probable that in offices where a number of small business machines are being installed, the above conditions would not prevail. The number of circumstances where these machines are installed vary widely and to illustrate what might happen, here is a possible example:

Our office is located in a multi-storey building with occupied accommodation above and below. We have one external wall which faces west. The office is 20 feet long and 15 feet wide and the window area is 50% of the external wall. We have six small machines which between them liberate 3kw of heat. We have no air conditioning or ventilation provided in the building.

The varying effect of outside weather conditions and the build-up of heat inside the room due to sun, occupancy and equipment would give results as shown in Table 1.

There would, of course, be some liberation of internal heat to outside but the time lag, due to building construction, would cancel out this effect to a great extent.

All three ambient conditions are typical throughout a summer's day. It can be seen that the conditions would be impossible for staff to work in, and probably highly detrimental to machine efficiency. In this particular example, the only satisfactory solution would be to install a small packaged air conditioning unit. Ventilation would serve no real purpose as the amount of relatively warm air required to keep the office at an acceptable condition would be enormous.

The problem that the user of the small machine has to decide is when and what environmental treatment is required. The answer to this problem is to call in a competent air conditioning engineer or consultant to advise. The solution to the problem could be a simple air extract fan or full air conditioning, depending on the scale of the problem. A rule of thumb here would be that offices with no installed machine load of less than 4 watts per sq ft could be catered for by a ventilation system, using ducting and outside air and those with loads in excess of this would require full air conditioning with mechanical refrigeration.

When designing the layout of the machine room, it is as well to position the equipment as far apart as is practicable from the operational point of view, to ensure that hot spots, caused by high machine density, can be eliminated.

If full air conditioning is needed, it is advisable to specify precisely the temperature and humidity limits for the room, and to equate the air filtration standards to the machine requirement and the building locality. Ideally, for comfort and maximum machine efficiency, the temperature should be 72°F ± 2°F, relative humidity 50% ± 5% and filtration to 95% at 5 micron particle size.

Care should be exercised by users already housed in air conditioned offices when

installing these machines, as the design of the building's air conditioning system will not have taken into account the large additional heat sources of business machines.

Office air conditioning allows for heat gains due to transmission through the building fabric, solar radiation, lighting and occupants but not normally for business machines. The solution here would be to add a packaged air conditioner to boost the available cooling.

A number of small business machines installed in a large office can also give rise to the physical problem of installing the necessary electric wiring for them. Chases in the floors are often costly, disruptive and sometimes not possible because of floor construction and building owner's permission. In such cases, consideration should be given to installing a modular suspended false floor. These floors are available with floor tiles of 600mm square, which are easily removable.

The cables can then be carried in the floor void and allow for simple wiring if a machine is to be removed, repositioned or added. If a modular floor is used the void can be utilised to distribute the air from the air conditioning unit.

Looking into the future, with the enormous growth of mini and micro computers, one can visualise large office complexes filled with machines. Care should be taken when planning such a complex, that the environment can be adequately catered for. One would like to see these complexes having provision made at the design stage for the future possible office requirements.

These would include central fan system to provide the necessary fresh air for ventilation purposes and maintenance of constant room humidity; piped cooling water supply to each floor to allow for heat dissipation from air conditioning units to be rejected to the outside; modular false floor throughout; realistically sized electrical distribution boards at each floor; and adequately sized goods lifts to enable equipment to be easily moved to its location without damaging walls, staircase and other fixtures.

This approach would allow for flexibility and growth as the complex grows and would minimise the cost of the final installation.

An indication of the above involved in providing the described services is: Full air conditioning, 5000 kw machine of installed business machine with a minimum unit cost of approximately £800; and false floors, £30 per square metre.

It only remains to wish you happy business machines in a good environment.

Table 1

	Temp °F	Hum %RH	Temp °F	Hum %RH	Temp °F	Hum %RH
Outside condition	70	50	75	50	80	40
Resultant room condition	120	12	125	12	130	12

THERE are two sides to recruitment: on the one hand the employer and on the other the employee. As with the old saying: 'One man's meat is another man's poison', so the problem from the employer's side is almost always the opportunity from the employee's side. More of that later. First let us look at the North of England and examine the geographical situation of the area involved.

The North of England covers a very wide area with a mixture of industry, agriculture and moorland and the 'perfect' person for the ideal job will not necessarily be situated in the right area. Someone located in Newcastle will not be able to travel to work in Manchester every day. Average journey times to and from work within the area loosely defined above are probably only 20 to 25 minutes, i.e. the majority of people working in Bradford live within ten miles of the centre of Bradford.

What makes the area so attractive is that it is relatively easy to live in a rural area and commute to reasonably large industrial centres. The most striking example of this is the North-East where it is possible to live within 30 minutes' drive of the Yorkshire Dales and North Yorkshire Moors and yet be within half an hour's travel of Newcastle, Durham, Tyne Tees etc.

The purpose of this article is to look specifically at recruitment within the computer industry and, as most people reading Computer Weekly will be aware, it is an industry with a very high proportion of specialist staff, the usual ones being operators, programmers, analysts, systems project leaders and supervisors and DP managers. This is made even worse by the fact that a very good programmer with first class knowledge of, say, IBM Cobol and Assembler cannot readily transfer to an ICL installation using Cobol and Plan. Alternatively a good application programmer will not necessarily be suitable for software programming work.

Now surely one might say that if a person has language then it cannot be too difficult to train him in a second language. Unfortunately, this approach not only increases 'lead time' to productive programming but it also means that the employer has an unknown quantity, i.e. an efficient RPG programmer does not necessarily make an efficient PL/I programmer.

There is also the problem of internal politics to be considered in this situation, where people in an installation who are already proficient in the language in use see a person joining them at the same salary who then has to be trained to convert to their standards.

Training for a graduate or other suitable person would probably be ideal in an environment where the staff requirement was able to be predicted four to six months ahead to allow for recruitment and training. However, the majority of vacancies arise because of promotion or a person

Live in the Dales, work in towns... it all points North

By D. Fisher

leaving necessitating an urgent replacement. So although from an employer's point of view training would be the easiest, it is very often impractical because of the time scale involved.

From the employee's point of view, it provides him or her with an additional area of expertise which will probably increase his market value. Therefore, the employer doing the training has got an even harder task of keeping his specialist staff.

The applicant must for his part decide what expertise he needs to add to his existing experience and then find a position suited to his requirements. Registering with a specialist recruitment company will afford him a good opportunity of finding the ideal job, as a good agency will take as much interest

employers to pay more and more for the expertise they require, due to the shortage of supply. However, the market has somewhat changed in the past few years. Whether this is due to the government pay policy or to a better ratio of demand to supply is uncertain, but what is certain is that DP managers, who at one time were being tempted with offers of high proportion show an average annual increase in salary over the past few years of less than 11%. This includes the high inflation years and would suggest that more people want to be DP managers than there are opportunities.

However, computer operators show a much greater increase in the same period, and the percentage increase is somewhere near twice of the DP manager. Systems analysts and programmers have prob-

ably just about kept pace with inflation.

I believe that this situation has been brought about by the number of people available increasing in proportion to the number of opportunities. The exceptions to this are probably in the area of the more unusual installation and technological advance, where the demand suddenly moves from nil to 100 units while the supply moves from nil to 10 units. Database and real time installations are probably the best examples of this problem.

It is, therefore, clear to see that from the employer's point of view, although in some areas of specialist installations the problems of finding suitable staff are very little better than they were during the 1960s, generally speaking, the situation has improved substantially.

Two methods of recruitment are basically used: direct advertising in local or trade press, and recruitment agency or consultancy services. There are benefits to both systems from an employer's point of view.

One final point is that a larger installation can suffer through frequent advertising as it creates the impression of a company with a staff problem. An agency, continuously advertising, becomes known and will therefore benefit

several people are required, may attract all of them, thus minimising the external cost of recruitment. However, if it does not there will be a need for further advertising, interviewing unsuitable applicants and an increase in 'lead time' causing substantial inconvenience to all concerned, most of all to the DP manager and his staff.

The service offered by a good specialist recruitment company will assist the client in several areas:

1. It will ensure that every applicant is interviewed before being sent out to a client. The purpose of this is to ensure that the applicant is likely to meet the client's requirements in personality as well as technical expertise.
2. CVs will be forwarded prior to the interview and when requested before a decision to interview is made.
3. In many cases advertising will not be necessary as some of the people already on the agency records will be suitable. This can greatly reduce the lead time to an appointment.
4. The client will interview fewer people, reducing time-wasting and the risk of not selecting the right one.
5. An agency can select a person who, though not the perfect applicant, is likely to meet the main requirements of the client. This person might not have responded to an advertisement for the same position.

From the employer's point of view, what is the perfect situation? Well, whatever method of recruitment he may settle for, the ideal is that there should be one applicant, meeting all the employer's requirements, including technical expertise, salary requirement, and the fact that the development which he is likely to get in that installation is exactly what he requires.

This is of course the employer's dream and in no way is it realistic. What is more likely to happen is that whatever method of recruitment is used, three or four people per vacancy will be interviewed. What is also likely to happen is that someone near to the perfect applicant will be accepted as the best available, and in-house efforts will be made to adjust his knowledge to suit his new employer.

One final point is that a larger installation can suffer through frequent advertising as it creates the impression of a company with a staff problem. An agency, continuously advertising, becomes known and will therefore benefit

NORTHERN APPOINTMENTS

QUADRANT RECRUITMENT

ON THE MOVE

Then Quadrant can help. Our Manchester and Sheffield offices have details of many exciting opportunities for:

Programmers — COBOL, PL/1, RPG, PLAN, MINIS, ETC.
Software Programmers to £8,000
Analysts and Analyst/Programmers to £7,000
Sales People to £14,000

Vacancies exist in most parts of the country, particularly in the North.

Interviews will be held in Manchester, Sheffield, London and Midlands. Please telephone the office nearest you to arrange the next step.

Ashley House, Ashley Road, Altrincham WA14 2DB. Tel. 061-928 8302.
 Bank House, Queen Street, Sheffield S1 1UF. Tel. Sheffield (0742) 738794.

AP 2/3 £2529-£3282 + £312 salary supplement, + phase 2 supplement

The Council operate an ICL 1901A with tapes and discs. Candidates must be experienced in COBOL. A salary survey will be provided with removal expenses, and provision of housing accommodation, in approved cases. Application forms and job descriptions available from the Personnel Officer, Town Clerk's Department, Municipal Offices, 57, James Street, Accrington, Lancs. BB5 1PQ. To whom they should be sent not later than 7th November, 1977. See 143. Consulting or Senior Officers or Members of the Council will automatically disqualify.

data processing

HAVE YOU CONSIDERED THIS ISSUE?

Small business computers: not only do we look at the hardware on the market, we also show that software ignorance is not bliss, and provide some pointers for company "discipline" when a computer is introduced. Paper handling equipment: an expert demonstrates how the right machinery can benefit the data processing manager.

Learn from the experiences of others: we select three widely differing uses of computers for the entertainment of all, and the enlightenment of many. Those are just three of the vital features to be found in the October issue of DATA PROCESSING.

Add to this: pages of products, concentrating this month on small business computers and paper handling equipment; the microprocessing scene; information for first time users; a round-up of the latest news in convenient form — and you begin to understand why DATA PROCESSING is essential reading for all managers, chief accountants and management services directors. All this, and much more, is packed into the October issue alone. Can you afford not to subscribe to DATA PROCESSING? — it costs just £15 a year (overseas £18) for 10 issues, all just as full of articles and information essential to anyone involved in computer management.

To subscribe, simply complete and return the order form below, to: ROOM 218, DORSET HOUSE, STAMFORD STREET, LONDON, SE1 9LU

The Fraser Williams Group represents an exceptional opportunity to join and progress in the software industry

We are a well established company with an impressive record of growth. Our turnover has increased by 50% in the last year, and it is planned to continue expanding at this rate. We therefore need good quality people to help with this expansion. It is group policy to promote from within the company wherever possible and excellent opportunities exist for promotion to senior positions. The work is varied, assignments cover a wide range of main frame and mini-computer equipment both in the U.K., and overseas. As well as an attractive salary we operate a profit sharing scheme which is paid half yearly and is based on an individual's own ability. We offer mileage expenses which make a significant contribution to the cost of running a private car. If you are confident you are the kind of person we require contact your nearest Fraser Williams office now!

SYSTEMS PROGRAMMERS—

GET YOUR "CICS" ON THE COAST

Have you between one and two years' involvement in Systems Programming and feel that you are not receiving the opportunities to train and develop your experience in this important area? Then, our clients, who are a wholly owned subsidiary of a major Food Group, are willing to develop your experience, train you into CICS, and also pay an attractive salary. They currently operate dual IBM 370 machines supporting a nation-wide teleprocessing network to 50 remote locations, and a major up-grade is imminent.

Working in pleasant offices on the attractive east coast, you will enjoy all the benefits associated with an International Group of Companies, including a very generous re-location package.

Initial Interviews will be held in London, Birmingham and Manchester.

REF. NO. CW/10/13

Fortran Programmer up to £5,500 p.a.

Atkins Computing, already established as a leading timesharing and remote access service company, are continuing their planned growth based on key regional centres. In line with our development plans for 1977/78 we need an additional Support Programmer based in our Warrington office.

Candidates, male or female, should already be familiar with timesharing and have some problem-solving experience in an engineering or operational research environment, with at least 2 years' FORTRAN. Our immediate aim is to broaden experience by involving the programmer in as many situations as possible. In the longer term, there could be a move into sales. Apart from a salary as indicated, we provide progressive employee benefits and relocation expenses where necessary. Please contact David Lloyd, Atkins Computing Services Limited, Fourmost House, Oakmont Lane, Warrington WA1 2EU, or telephone Warrington 34415.

Atkins Computing

Analysts and Programmers up to £4,500

Merseyside

Due to the planned development of a Production Control system and expansion of on-line facilities, this well known company — a long-established ICL 1900 user — requires young experienced Analysts and Programmers to supplement its development team.

Programmers

You will have gained a minimum of 12 months' experience of COBOL programming in a mainframe environment. Applicants for more senior posts should have been working in an ICL 1900 site using both COBOL and PLAN — on-line experience is not necessary as full formal training will be given; however, a wide range of application experience is very important. Our client actively encourages progression into systems work should you have that ambition.

£3,500 to £4,500

Systems Analysts

You will have already have completed at least one project on a main frame computer and have been involved in analysis for 18 months. If you have a wide range of applications experience and programming knowledge, then this is the most advantageous position. Hardly background is unimportant — you must however, possess the ability to apply computer technique to solving business problems. The company are committed to data processing and other major developments are planned. Current hardware facilities include a medium sized ICL 1900 using EOS 80s and a large network of local TP facilities. Easy access is available by public transport both from Liverpool city centre and the suburbs, car parking facilities are also available.

up to £4,300

To further your career on Merseyside please telephone our MANCHESTER office quoting ref. CW60-7M.

Data Processing Manager

New Installation c. £5,000

We are an established building and civil engineering contracting company operating throughout the U.K. with our head office and main accounting centre located at Warrington, Cheshire.

We are currently planning for the installation of a small computer system, and a Data Processing Manager is required to take charge of the selected equipment. Initially the work will consist of installation planning and liaison with a software house for the conversion of accounting systems operating on an ICL 1004.

Applicants, male or female, aged 25-35 years should preferably have practical experience of implementing accounting systems in the construction industry and have the ability to communicate effectively with user management. A knowledge of RPG II is also desirable. Candidates of employment are those associated with a large company and include pension scheme and group BUPA scheme; re-location expenses will be paid if necessary.

Applicants should write giving personal and career details to:

The Personnel & Industrial Relations Manager,
A. Monk & Co. Ltd., P.O. Box 43, Warrington,
Cheshire WA1 4JB.

The Engineering Industry Training Board has the responsibility under the Industrial Training Act, for training in engineering and allied industries. We are at present inviting applications for the following positions in our Watford office.

Senior Systems Analyst

A Senior Systems Analyst is required for the design and implementation of commercial systems for an I.C.L. 1902 S.

Candidates should have had 2 years systems experience. The ability to communicate effectively and knowledge and understanding of business procedures is essential. The Board has a 7502/15V0U system and experience in this field or with MAXIMOP would be an advantage.

The salary being offered is in the range of £4,697 to £5,666 including supplements. Benefits include a Contributory Pension Scheme, 20 days annual leave increasing with service to 25, and Luncheon Vouchers.

Research Officer

Our Research Division is responsible for identifying the research and information needs of the Board and for commissioning or carrying out the necessary studies.

A graduate in Statistics, Mathematics or Computer Science is required to join a small team providing Computing Services to the Division. The post will provide an opportunity to gain training and experience in data analysis, and in the writing of data management and analysis software on an ICL 1900 series computer. A knowledge of FORTRAN and/or COBOL is desirable but not essential.

The appointment will be either as a Research Officer (starting salary: £3,113 p.a. including supplements) or as a Graduate Trainee (starting salary: £2,596 p.a. including supplemental), depending on qualifications and experience. Benefits include a Contributory Pension Scheme, 23 days annual leave and Luncheon Vouchers.

For an application form for either position, please write or telephone:

Mr. E.T.G. Shuldham,
Engineering Industry Training Board,
P.O. Box 148, 41 Clarendon Road,
Watford WD1 1HS,
Tel: Watford 44322

Application Programmers & Programmer/Analysts

for BP Group Head Office

BP operates a large multi-processing Univac 1100 installation for running remote batch, database, and on-line application systems which cover both the commercial and technical activities of the BP Group. Including those associated with Shipping; Exploration; Production; Engineering; and Purchase and Storage. We are closely involved in computer application systems connected with North Sea oil.

THE NEED: An increased demand for our computing service has created the need for more programme and programmer/analysts to develop and support such systems. They will be based in the City of London.

THE SPECIFICATION: Our main programming languages are COBOL and FORTRAN and applicants should have been using one or other of these languages for at least three years. Practical experience with Univac 1100-series computers will be an advantage. We are looking particularly for those with computing experience in the geographical and commercial fields. A degree or equivalent professional qualification is essential. Age range 24 to 35.

THE CONDITIONS: The conditions of service are excellent and fringe benefits include non-contributory pension scheme, subsidised restaurant, and first-class sports and social facilities. Salary is dependent upon experience.

APPLICATIONS: Please write giving age and brief details of qualifications, experience, and current salary, quoting reference PFC/B/FY, to: The Manager, Central Recruitment, The British Petroleum Company Limited, Britannic House, Moor Lane, London EC2Y 9BU.

MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

PROJECT LEADER

Near PUTNEY c £6,000
Having gained good analysis experience you are now ready to progress to a Project Leading role. Heading a development team of seven or eight you will be given responsibility for several major systems and plan, schedule and supervise the entire workload of your team. The Company operate one of the foremost sites in the country and you will have the latest equipment and techniques at your disposal. An individual training programme will be agreed to ensure your progression along an established career path which includes options to enter main line managerial situations. Sound analysis experience and flexibility are the keynotes for success and experience of on-line systems would be ideal. You will be offered a financially sound package which includes 4 weeks' holiday, LV's, Pension Scheme and Flexitime.

PROGRAMMING CONSULTANT 3-4 YEARS' ASSEMBLER

LONDON UP TO £6,500
We are seeking a Programmer or Analyst/Programmer keen to accelerate his/her career by a move to Team Leading. You will be expected to play a major role in the development of new systems, being responsible for the programming and implementation of projects from specification through to overall testing. The person appointed will have in-depth knowledge of Assembler with an appreciation of commercial data processing. Previous supervisory experience is not essential although a commitment to maintaining high standards of coding and documentation are required. The company a subsidiary of a major group offers a friendly environment with the exciting prospect of allowing you career and responsibility to grow with the company. The Offices are conveniently situated to both underground and main line stations.

POTENTIAL ANALYST

LONDON c £5,500
A keen ambition to progress to analysis and a willingness to program, coupled with the flexibility to cope with "hands-on" situations are the main requirements to secure an extremely rewarding position. Functioning as an Analyst/Programmer the position will entail staff supervision and responsibility for the development of projects from feasibility to their successful implementation. An outstanding feature of this appointment is the unusual nature of the applications using two mainframes and a mini computer linking the Company's branch offices throughout the country. Candidates should have a good programming background gained on any machine and enjoy working in a small D.P. environment which in return offers excellent scope for career development and progression.

NEW INSTALLATION ANALYSTS and ANALYST/ PROGRAMMERS

Near HAMMERSMITH £4,000 to £6,500
This is a rare opportunity for Analysts and Analyst/Programmers at all levels of seniority to join a young department at the grass roots. After the initial phase of implementation a further fourteen applications are scheduled for computerisation and offer the successful candidates involvement in their development from inception to completion. The Company is a rapidly expanding major British organisation with a wide range of interests in industry. The systems are therefore varied and in some cases extremely unusual. The new Computer Services Company has been established to supply the data processing requirements of the Group using a large countrywide T.P. staff and can offer an exceptionally attractive and progressive career path to experienced Analysts and Analyst/Programmers with any form of good commercial background. Commencing salaries will be offered commensurate with experience and conditions of employment are excellent.

MINI COMPUTERS c£12K + Car INTERNATIONAL U.K. based

The International division of this worldwide highly successful mini computer manufacturer has attained outstanding results in its drive into Europe, Middle East and Africa. Furthermore the successful conclusion of the next stage of their expansion programme will see the division doubling in size and turnover during the next 12 months. As part of their plan they are now wishing to recruit a high calibre sales person with a strong technical background and faultless sales record, who will be capable of negotiating at the highest level and have the aptitude and resilience to work in the international market. The responsibilities of this position are to maintain existing accounts as well as obtain new business selling to OEM customers, distributors and end users.

Based in the U.K. Head Office, there will be extensive short term travel, and experience of selling overseas would be an asset though not essential.

Ref. CW/601.

TIME SHARING c£10K + Car LONDON

Rapid access to management information systems on a time sharing basis is the economical solution sought by many top companies today. This is an ideal opportunity to benefit from this expanding market by joining a small, dynamic team of professionals in the new time sharing division of a large and highly respected company. This team possesses all the expertise required to constantly develop and enhance the already considerable selection of packages they offer. These developments include financial, database, statistical and major program language facilities. You will be selling these to both new and existing customers and in order to achieve the fullest rapport with your clients it is essential you possess a good technical background and ideally have had experience in the management information market. Every incentive is given to the salesmen: individual and group commission schemes reward personal and team success.

Ref. CW/602.

TERMINALS c£14K + Car NORTH/MANAGER

To meet the growth requirements of the U.K. Division of this secure and successful American Corporation, a Sales Manager is required to handle all accounts and support activity in the North of England. Their major product, an advanced software driven terminal, is directed towards the RJE and Distributed Data Processing market.

This is a keenly competitive area and thus only a person capable of combining an in depth knowledge of the RJE networking and communications philosophy with the outstanding personal qualities required to market and capture a largely untapped source of sales need apply.

Obviously previous sales success is essential but other qualifications are less important than common sense, industry and adaptability.

The job is extremely demanding but highly rewarding both in terms of remuneration and future prospects.

Ref. CW/603.

MAINFRAME c£10K SOUTH/MIDLANDS/SCOTLAND

They are one of the world's leading mainframe manufacturers, they have just had their best sales year to date, and best of all they are looking for salesmen throughout the company. The requirements are for experienced, mature, successful sales persons who have been selling commercial systems and preferably have had previous technical background. The responsibilities are to sell their medium to mainframe computers to both new and existing customers. The systems are designed for each customer, a large support and training staff providing the necessary backing to the sales force. Just as the range from medium to mainframe systems provides scope for immediate sales success, so also does the expansion from large to major company provide for future career development.

Ref. CW/604.

MICRO COMPUTERS c£10K + Car LONDON/MIDLANDS

A company's most important asset is its people, is a dictum ignored by many, but not by this international organisation. Their recognition of the value of the individual is evident in the policies of pay and promotion offered. They manufacture a wide range of measurement and computation equipment, and produce systems combining the two. Currently they require a number of sales persons, in various parts of the country, to sell small desk top computer systems.

These desk based units may be linked to any manufacturer's mainframe or used as stand alone devices. It is essential that applicants have a technical background gained probably in a scientific or engineering environment, as well as the experience needed to sell to both OEM and end user market.

Basic salary, commission, bonuses, profit share, a 2 litre company car, plus private mileage, the chance in the future of promotion to management, to move into marketing, or to go overseas — these inducements are not just tantalising promises but realities within this company.

MANAGEMENT & EXECUTIVE SELECTION

SPOTLIGHT ON SALES

We recognise the importance of the role of the salesman and we have specialised in this area for a number of years — hence we have built up a rapport with all the major computer companies and we have been asked by 12 of our clients to present the following opportunities.

MINI COMPUTERS c£11K LONDON

The concept of selling modular systems to solve the problems of everyday business life, has proved to be the right one for this European manufacturer. For the last four years the U.K. division has sold a range of small business systems, complete with packaged or tailor made software, for commercial applications. Their latest line of attack has been directed on the large organisations in the U.K., and the resulting expansion is their reason for seeking salesmen to handle these national named accounts.

Maturity and experience are the necessary attributes needed to handle this level of the market. A commercial background gained preferably through selling mini computers is essential.

The success of this division to date is a mere indication of greater things to come, and thus prospects for remuneration and promotion are excellent.

Ref. CW/606.

MAINFRAME c£8K CITY

There is a fortune to be made in finance, computerising the City's insurance companies and merchant banks, and our client has made a major impact in this area. In this fast moving field they can offer the reliability of their own established medium and mainframe computers, linked with the versatility of constantly developed hardware and software. Keeping ahead of the competition has brought them success. To further this they require additional salespersons to open new business and develop existing accounts.

A proven record gained through mainframe sales is imperative, a background in finance desirable. This company prides itself in the professional structuring of the sales departments, providing ample opportunity for later promotion.

Ref. CW/607.

MINI COMPUTERS c£10K + Car HOME COUNTIES

Pioneers in the use of mini computers in distributed data processing, backed by one of the world's largest companies, this successful company is now setting up a young, dynamic team to establish itself in a new area of the market with the first time user. They sell a powerful mini computer system with keyboard, screen, discs and printer, complete with a comprehensive commercial package range, at a highly competitive price. This means of course that a good salesman can make a killing provided he is sufficiently motivated to open-up this new business area. As well as the necessary personal attributes required to achieve this, it is also essential that candidates have proven sales experience in the commercial sector. This is an excellent opportunity for the young sales persons to make their mark in a remunerative market.

Ref. CW/608.

For full details of the appointments please contact Faye Ogilvie or Gareth Bennett-Coles.

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

COMP UTILITY c£10K + Car LONDON

This multi-national, multi-million company created the computer utility concept of providing central computer power to users at remote points, and have subsequently grown into one of the largest and most successful service organisations in Europe.

They offer flexibility to the customer with the choice of a comprehensive package range, or system development on direct access or remote batch terminals; and in line with today's requirement offer distributed processing.

They now require sales staff to sell their advanced commercial packages and access systems. The emphasis is on new business. The sales force are freed from post sales responsibility by the early and continuing involvement of the support staff.

Commercial selling experience is essential, gained either with a bureau or hardware manufacturer.

This is the doorway to a lot of money for the man who is capable of opening it.

Ref. CW/609.

MINI COMP c£8K CITY

The world's first and most popular OEM mini computer supplier is looking for ambitious computer people to join their City branch. Two different types of vacancy exist. First they require persons with a proven sales record gained in a commercial, scientific or engineering background. Second, they need experienced banking systems people, who have not necessarily sold before, but who are interested in taking up that career. As part of a highly professional team, the salespersons are responsible for the total operation from the first customer approach, through to contract negotiations, handling either large accounts or new OEM contracts.

Skilled people with drive and determination are guaranteed to go far in a company whose low cost, high performance equipment has sold around the world, and whose future sales seem set to soar.

Ref. CW/610.

BUREAU c£9K + Car LONDON/HERTS

Backed by a successful British group, this large, thriving bureau is unparalleled in its teleprocessing experience. It currently controls a vast national and shortliff, international network, offering all services from batch processing to facilitate management. Its package range is equally expensive covering everything from accounting applications to micro film systems. It offers a comprehensive service within the group in addition to having an extensive external customer base.

It is to create new business in this area that they require salespersons. To qualify for such a role specific qualities are required, namely a totally professional approach to selling, backed by a sales record of substantial achievement preferably gained in a bureau environment.

A realistic base salary up to 5½K plus good commission scheme and car provided an interesting package.

SYSTEMS PROGRAMMERS ANALYST/PROGRAMMERS

SALARY £4,500 to £7,500 p.a.
with additional benefit

Alimand Management Services Ltd. have specialised with an acknowledged degree of success in Mini-Computer applications currently concentrated in the banking and financial sectors.

Following sure and steady expansion we are currently recruiting efficient and mature personnel to fill interesting and demanding assignments in the UK and the Americas. There are a range of opportunities from one-year's experience upward. Tel. Graham Russell on 01-581 1234 or write: Alimand Management Services Ltd., 260 Brompton Road, London SW3 2AT.

CONTRACT & PERMANENT PROGRAMMERS IBM & DEC PDP

Continuing our policy of plant expansion during 1977, Euroco now have a number of opportunities for Permanent and Contract staff who are seeking interesting and varied work in either our Large Systems or Mini Computer Division. We are currently looking for programmers with anything from 2-4 years' experience and the flair and skills to carry out assignments effectively and efficiently. In return for your skills, Euroco offer job satisfaction, continuity of employment for contractors, a starting salary up to £8K p.a. and performance and profit linked bonus scheme and the normal fringe benefits. Contractors will be offered competitive rates up to £200 per week + expenses and on certain contracts bonuses will be offered.

The skills we currently require are:

IBM COBOL/PL1 or **£6K p.a. + expenses**
or **£175 p.w. + expenses**

Two Programmers with the above skills are required in the West Country for an interesting conversation and development on one of our major client's systems. The ability to communicate with user management is essential and the additional knowledge of ICL COBOL would also be useful.

Ref. 25/10/01

IBM OOS or UNIVAC 903D ASSEMBLER **£175 p.w.**

One Programmer is required to work at one of our clients, a major international bank in London. The application is based on the development of a foreign exchange system. A knowledge of structured programming techniques would be advantageous.

Ref. 25/10/02

IBM OS ASSEMBLER **£175 p.w.**

Two programmers are required in Central London to work with an already established team, who are currently maintaining and developing a complicated financial system.

Ref. 25/10/03

IBM DOS COBOL **£175 p.w.**

One Programmer is required for development work which is currently being executed by a small team of our own staff. A knowledge of structured programming and VSAM would be an advantage.

Ref. 25/10/04

PDP11 RSTS E **to £67K p.a. + bonus**

Our own mini computer division is currently seeking three applications. Programmers with 1-3 years' experience of BASIC+ programming techniques. We are currently developing a real-time on line order processing and stock control system for a large international company. The majority of the programmer's time will be spent at our offices but there will be opportunities of working at the client's installation for which expenses will be paid.

Ref. 25/10/05

FOR OUR CLIENT

PDP11 RSTS E **to £5K p.a. + bonus + expenses**

One of our clients, a major force in OEC mini computer systems, is seeking a sales oriented support analyst/programmer to assist him in the development and sales of client based commercial systems. The successful applicant will need 2-3 years' experience of BASIC+ programming techniques and the ability to communicate at a sales level with their clients.

Our client offers a salary up to £5K per annum + a bonus in the region of £1.7K per annum, expenses and car allowance. There are also the normal company fringe benefits.

Ref. 25/10/06

We can't say anymore than that - except what you have to be to get them. Male or Female, preferably 24 or over with a minimum of two years' in-depth experience of the required skills. Why not look for a well established international group of companies?

Ring Roger Slade now on 01-537 9800 during the day or leave brief details and a call back number for us on our telephone answering machines.

WATFORD

Shift Leader

A vacancy exists for a Shift Leader in the Engineering Industry Training Board's Computer Department at Watford.

The present hardware consists of a 48K 1902S 4 XEDS 60, 2 X MT, 2 X LP CD, running under built manual executive and George 2 +

On-Line processing is currently being developed, using ICL 7512 MIPs and MAXIMOP.

Applicants should possess:

- At least 3 years' experience of 1900 Hardware
- Proven supervisory experience, preferably at Shift Leader/Supervisor level
- Sound knowledge of George 2 and ICL utility programs

A two-shift system is currently in operation, covering the hours 09.00 hrs - 17.00 hrs (Monday - Friday) and 23.15 hrs - 08.00 hours (4 nights).

Conditions of employment and environment are excellent.

-Salary (depending on age and experience) in the range £3,400 to £4,300, inclusive of shift allowance and Phase I and II Supplements

- Paid overtime - 23 days' leave
- Luncheon vouchers - 60p per day
- Contributory pension scheme
- Generous paid sick leave

Why not give Mr. O. Hirst a ring on Watford 44322. Ext. 13, or write for an application form to:

WHAT IS A BUREAU?

It's a place that is continually busy - answering client queries, meeting deadlines, error handling, setting up JCL, and dealing with any number of other urgent jobs. Computer bureau staff never get time to be bored, and certainly can't complain about lack of responsibility. We need the following people to help us cope with our heavy workload.

SHIFT LEADER

Possibly you are currently a senior operator ready for promotion to Shift Leader. You will have a sound knowledge of DOS, used with a spooling system, and have definite leadership capabilities. Salary very negotiable. c£4,000.

OPERATOR

With at least 6 months' DOS experience, preferably more, and ideally a knowledge of DOS JCL. Salary in the range of £3,000 - £3,500 depending on experience.

DATA CONTROLLER

In addition to general data control duties you will be involved in client liaison and job setup. You must be able to handle pressure situations effectively and communicate well. Knowledge of DOS JCL a distinct advantage. Salary £3,000 - £3,500. Contact: MARILYN DAVIDSON

NEW JERSEY U.S.A.

The President of a prestigious U.S.A. Software House will be interviewing in London the week beginning November 14th. This is the first recruitment visit to England of this highly professional and profitable organisation and they want to meet Analysts/Programmers and Programmers of all levels. O.S. COBOL is essential and IMS experience would be an advantage, but not essential.

A slide presentation on both the company and living in the U.S.A. will be given together with the opportunity of discussing living conditions and costs with one of our U.S.A. based people.

An excellent salary package is offered along with the opportunity to travel within the U.S.A. on business.

For further details and to schedule an interview.

Contact LINDA BENSTED.

DO YOU WANT TO WORK IN S. BUCKS?

If so, these vacancies will be of interest to you.

Our clients installation comprises an IBM 370 running under DOS/VS POWER/VS. A number of commercial applications are scheduled for development in the near future which will heavily involve Databases and the company is prepared to give you necessary training in this area.

ANALYST/PROGRAMMER

to £4900

In this capacity you will be involved in all aspects of complete projects from feasibility to implementation so flexibility and a responsible attitude are needed as well as experience in Cobol or RPG II.

PROGRAMMER

to £4,000

A minimum of 1 year's Cobol experience is required. Promotional prospects to Analyst/Programmer are excellent for the right applicants as the company believes in promotion from within.

Although experience on IBM 370 would be preferable, applicants for both positions with experience on other manufacturers hardware would be welcomed.

Anglian Water Authority

The Authority is installing a dual Honeywell 66/10 at its Huntingdon Computer Centre which will be linked via a network of over 70 terminals to 20 different offices.

A major programme of computer development using Data Base Management and Telecommunications techniques has now commenced and this offers an exciting opportunity for computer professionals to be involved in a challenging period of development for a recently formed Computer Services Department.

BUSINESS SYSTEMS

SYSTEMS ANALYSTS RP 31 (H5A012/015) up to £6,000

A strong computing background is required with experience of analysis and design of financial computer systems in large installations, on-line applications and techniques and data base concepts.

PROGRAMMING TEAM LEADER RP 25 (H5A019) up to £5,500

A minimum of three years' COBOL programming experience is required in a large machine environment. Experience of interactive program development, modular/structured programming techniques, at least one major operating system, and programming standards and control procedures together with experience of team leading is required.

SENIOR PROGRAMMERS RP 26 (H5A027/28) up to £5,000

A minimum of three years' COBOL programming experience is required in a large machine environment. Experience of on-line program development and modular/structured programming techniques is required.

PROGRAMMERS RP 27 (H5A032) up to £4,500

A minimum of two years' COBOL programming experience is required in a large machine environment. Experience of on-line program development and modular/structured programming techniques is desirable. Applicants will initially be required to assist in the development of the Authority's Customer Service System for a consumer base of approximately 2.1 million properties. Subsequent development will include a fully integrated terminal based financial system.

All posts are located at Regional Headquarters in Huntingdon. Relocation expenses are payable in appropriate cases. Application forms (returnable by 10th November, 1977) are obtainable from the address below, or by telephoning Huntingdon (0450) 56151 - Ext. 252. Personnel Department, ANGLIAN WATER AUTHORITY, Diplôme House, Grammar School Walk, Huntingdon, Cambs. PE18 8NZ.

Computer Centre Senior Computer Operator

Salary scale
£3827-£4655 inclusive

Applications are invited for the post of Senior Computer Operator in the Computer Centre. Applicants for this post must be at least 23 years old and should have at least two years' computer operations experience, some part of which should have been on C.I.L. 1900 equipment. Preference will be given to applicants who have also had some experience in the control of operations staff.

Thames Polytechnic Computer Centre provides a service to the academic staff and students of the Polytechnic and to the administration. The present equipment consists of an ICL 1902A with 48K, E.D.S., M.T. and the usual input/output slow peripherals. A multi-access service is offered via a screen and Maximop and also via several D.E.C. machines linked in the London Polytechnic network.

Details and application form (to be returned by 8 November, 1977) from the Staffing Officer, Thames Polytechnic, Wellington Street, London SE18 8PF (01-894 2030, Ext. 433).

Software Development West Holland Communications

Analyst/Programmers, Senior Analyst/Programmers £8000-£11000 Consultants, Senior Consultants £12000-£15000

Consider the benefits of working in the most successful multi-national group in the design and implementation of DATA-COMMUNICATIONS systems, (on-line, real time, message switching and computer networks)

- ★ varied, advanced and sophisticated projects
- ★ numerous types of mini hardware
- ★ software flair and ingenuity encouraged
- ★ rapidly growing state-of-the-art company
- ★ increased career development possibilities and progression profile
- ★ higher standards of living, relocation expenses paid

★ based in West Holland, one hour anywhere UK, easy access Europe

We want to discuss all the above in detail with qualified and experienced Software Professionals who wish to diversify and improve their DP experience which should include at least a year on mini based systems.

In return high salaries will be offered to those who are at ease within a client orientated environment where standards are of prime importance and the individuals expertise is recognised by progressive improvement in positions and financial status.

WHITBREAD FLOWERS LIMITED SHIFT LEADERS

Whitbread Flowers, one of the largest Operating Companies in the Whitbread Group, have vacancies for Shift Leaders in their Computer Operations Department at Cheltenham.

The installation consists of:

A Honeywell Level 64/20 running under GCOS 2000 soon to be upgraded to run under Level 64 NATIVE GCOS.

Four Honeywell 716 mini computers providing a real-time service for remote terminals, and shortly the introduction of further communications equipment.

The successful applicants, who may be male or female, will be responsible for the running of the Machine Room for the duration of the shift.

They will have considerable operations experience on a GOS based operations system, preferably Honeywell. A knowledge of communications equipment would be an advantage and proven ability to co-ordinate and control staff is essential.

3 shift working is in operation, in respect of which a generous shift allowance is payable.

Excellent salary, four weeks' holiday, contributory pension scheme, subsidised canteen, and other fringe benefits.

Please apply in writing stating age, qualifications and experience to:

The Personnel Services Manager
Whitbread Flowers Limited
Monson Avenue, Cheltenham, Glos.

Computer System Engineers

with a flair for using advanced techniques
£4500-£5500

At Letchworth we design and build customised computer systems. Right now we're looking for System Engineers (men or women) who will be prepared to accept a large degree of individual responsibility within small project teams. You must be able to demonstrate an ability to design and write low level software for Executive minicomputer applications, control programs or test programs. We'd also like you to have a flair for utilising new and advanced developments. You will be involved in software and

hardware aspects of projects from conception to completion offering a wide variety of work and the opportunity to travel both within the UK and overseas.

Why Letchworth?

Letchworth is situated in the pleasant surroundings of North Hertfordshire and offers a wide range of housing, good educational opportunities and excellent road and rail communications. In appropriate cases a generous relocation package will be offered. Find out about the excellent career

development opportunities and attractive conditions. Come in and see us in London on Wednesday 2 and Thursday 3 November at the New Ambassadors Hotel, Upper Woburn Place, (near Euston Station), anytime between 5 pm and 10 pm. We'd like to see you, but if you can't come along, write with details of your experience, quoting reference CW1546, to Peter Christie, ICL, PO Box No 4, Icknield Way, Letchworth, Herts. Alternatively telephone him on Letchworth 046261 2191 for an application form.

LLOYD'S OF LONDON

Real-time Software Engineers

Dorset

to £5,500

Our client is a leader in state of the art technology involving DEC PDP11 central processors & microprocessors (programming in CORAL) for traffic control systems projects. The applications are wide, both in the U.K. and export markets. Hence the need is for engineers with four or more years relevant experience, who wish to broaden their activities in the real-time field and who are also interested in dealing directly with clients as a design engineer.

Apart from competitive salaries & a variety of work, the positions offer a first-class working environment and the obvious advantages of working in Dorset.

For further information please contact John Nolan on 01-638 1891. Richard Owen Advertising, 56 Moorgate, London EC2R 6EL.

CONSULTANT PROGRAMMERS

Up to £7,500

If you're wondering why we're prepared to offer programmers a systems analyst's salary, the answer is simple. To find the best, you have to offer the best. A couple of years' ago, we set out to build a reputation in a very overcrowded business. We knew there was no shortage of software houses, but we also knew there was a huge short-fall in software expertise. So we decided to invest in the best - and, when you look at the way our client list has grown over those two years, you really can't fault our thinking.

Over the years we've also stuck to the principle of being totally honest with people.

We're a small team, not the biggest, but we know our business. We think we're a lot more professional than the bulk of software consultancies (at least, our major clients think so). And we also believe there's a lot of room for expansion in software. We hope you share our enthusiasm.

Right now, we're in the market for really good programmers. Men and women who have been in the business for three or more years, have a thorough knowledge of at least two languages and, hopefully, have some solid experience on preferably IBM systems. If you qualify, we'll be offering much more than just a good salary.

We'll be giving you the chance to work on a variety of projects for some of London's largest computer users. In other words, you'll get the high-level involvement without the full-time frustrations. We'll also offer you every opportunity to train and develop your specialist knowledge.

And most important of all, if we like each other, you will form the nucleus of what is arguably the most able and successful young software company in London.

Believe us, if you join our management team, you can forget about £7,500 and start thinking in terms of five figure salaries. Let's talk.

Software Expertise Ltd

Systems Analyst

High Wycombe, Bucks. C £4,500
E. Gomme Limited, who manufacture G-Plan furniture, have a vacancy for a Systems Analyst in their IBM 370/125 installation.

Applicants, aged 24-28, must have several years' computing experience with at least one year spent in systems analysis, ideally in a manufacturing environment.

The successful applicant, who will report to the Systems Manager, will play an important part in the design and implementation of a wide variety of new applications, as well as being involved in the development of existing systems, which include a trial T.P. Order Entry application.

Conditions of service are excellent and assistance will be given with relocation expenses, where appropriate. Write to the Company Personnel Manager, E. Gomme Limited, P.O. Box 27, High Wycombe, Bucks.

COMPUTER CORRESPONDENT

DATA PROCESSING, the international magazine for corporate and computer management, has a vacancy on its editorial team for an all-round journalist.

The successful applicant can expect a busy and varied working life including the conceiving and writing of original articles, some news reporting, plenty of subbing and proof-reading, attendance at press conferences, opportunity for foreign travel and some commissioning of work.

Write with details of age, education and experience to Tony Rend, The Editor, "Data Processing", IPC Electrical-Electronic Press Limited, Dorset House, Stamford Street, London SE1 9LU.

CONTRACT ANALYSTS AND PROGRAMMERS

We wish to recruit a number of Systems Analysts (preferably with Real Time Costing and Production Control experience) and programmers with 2 years' + experience in any of the following:

COBOL (any machine) PL1, BAL (preferably CICS), RPGII, FORTRAN

We can offer long or short term assignments with major companies in the UK. If you are looking for good money, prompt payment, continuity of work, etc.

PROGRAMMERS EXCELLENT CAREER PROSPECTS BIRMINGHAM SALARIES TO £4,000 P.A. PLUS ABOVE AVERAGE FRINGE BENEFITS

Our clients who are the consultancy arm of one of the UK's largest independent computer services organisations are currently enjoying considerable success. Their current commitments are particularly high in systems involving DATA COMMUNICATIONS in commercial systems utilising mini computers. New personnel are actively sought to join this small professional team.

CANDIDATES SHOULD HAVE:

- * a minimum of 18 months' in-depth programming experience on mainframe or mini equipment
- * a preparedness for limited travel
- * an ability to work alone from systems specifications
- * a desire to accept career enhancement by progression into systems work.

These positions would ideally suit Programmers in their early 20's who wish to move into a more progressive environment within commercial data processing.

These vacancies are of an urgent nature and interested candidates should contact without delay:

If all the answers are YES then why the vacancies? — well two years of wage restraint has hit everybody and some people have been forced to move (perhaps that's your problem too?). Move to our client — salaries must be competitive with anyone in the business.

Senior Analyst

To £6,300 + Benefits

Lead Programmers (2)

Probably 5 years' experience in analysis and programming, with a financial systems background. Successful implementation of at least one system. An ability to talk to users and identify and understand their problems.

Must have management and project control ability, good motivating skills and strength of character. Technically good COBOL and JCL in an OS environment on 360/370 series.

Analyst

To £5,200 + Benefits

Programmers

Good academic background, probably about 3 years' experience, preferably with some involvement in systems analysis and design or as an analyst/programmer.

With 3 years good, solid OS COBOL on 360/370 series, you can be paid a sterling salary at the top of the range.

Well known as a leading company in its field our client needs to find the right people for these jobs now. For more information or the answer to any other questions, telephone our CROYDON office and ask to talk about CW57-7J.

COMPUTERCALL

ATTENTION . . . COMPUTER ENGINEERING & OPERATIONS PERSONNEL

Can you accept the challenge of employment in a dynamic, young and expanding company?
If so, you are invited to consider joining "COMPUTERCALL LTD" as a CONTROL CENTRE OPERATOR and play an important role in providing a unique service to computer maintenance organisations.
COMPUTERCALL provides a centralised operations control centre for computer manufacturers which co-ordinates engineer assignments and direct reporting. COMPUTERCALL also provides critical parts warehousing and a delivery service to support maintenance actions. The service is a continuous 24 hour operation.
COMPUTERCALL needs personnel with knowledge of the computer service environment to fill CONTROL CENTRE OPERATOR vacancies. Operators are responsible for receiving telephone calls from equipment users, recording and analysing faults, deciding priorities and contacting the relevant manufacturer's engineer. Duties also include arranging delivery of critical parts and test equipment.
Consider the immense value of this service to the computer maintenance organisations and decide if you wish to get involved and be rewarded with an attractive salary plus a profit sharing scheme directly related to performance.
If you can meet the challenge, call "COMPUTERCALL" any time day or night and discuss this opportunity with one of our senior engineering staff. TELEPHONE 01-588 2088.
Ossett House, 24 Windmill Road, Brentford, Middlesex.

COBOL PROGRAMMER Salary up to £4,500

We are looking for a programmer aged 22-28 with a minimum of 2 years' Cobol experience — IBM 360/370 background an advantage.

The successful applicant would participate in project work and have the opportunity to be trained in analysis. We offer generous fringe benefits including a subsidised staff mortgage scheme, free lunches, and pension scheme.

If you are interested, please apply giving brief career details to: Mrs. S. Iyer, Personnel Administration Department, Sun Life of Canada, 2/4 Cockspur Street, London SW1. Telephone: 01-930 6400 ext. 221.

COMPILER ASSEMBLER PROGRAMMERS

WEST OF LONDON

Permanent to £8,500
Contract c. £200 p.w.

A major U.S. Mini Computer Manufacturer is developing and expanding its compiler facilities by upgrading and designing existing and new compilers. Their immediate requirements are for two experienced Assembler Software Programmers with relevant in-depth compiler writing experience. The more senior post is for a Project Manager, and the second opening would ideally suit a senior systems programmer.

Whilst Assembler programming experience in a Mini computer environment is essential, any prior exposure to a high-level language would be beneficial.

Both positions offer exceptional prospects to develop within the Software development group of this very successful Computer Manufacturer. Several attractive fringe benefits accompany the above average salaries being offered.

Interviews will be held in London during the first 2 weeks of November and prospective applicants should telephone Informatix for full details.

Ref. 43/18

1900 PROGRAMMER AND ANALYST MOVE ON MOVE ON-LINE CITY To £5,500 PLUS SUBSIDISED MORTGAGE SCHEME

With On-line development using MAXIMOP in progress our Client — an important financial group — is moving towards a new phase in their DP history.

Four major project areas are at the development stage, giving rise to a lively environment where project team members feel fully involved in each system.

This growth now creates prime opportunities for the following:

- PROGRAMMER** — With around 3 years' ICL 1900 COBOL experience.
ANALYST — With 3 years' commercial experience, able to take initiative in a young dynamic team.

Career opportunities are of the first order especially for those wishing to increase their expertise in on-line systems environment.

An excellent financial package includes mortgage scheme, non-contributory pension and free lunches, whilst flexi-time is in operation.

COMPILER ASSEMBLER PROGRAMMERS

WEST OF LONDON

Permanent to £8,500
Contract c. £200 p.w.

A major U.S. Mini Computer Manufacturer is developing and expanding its compiler facilities by upgrading and designing existing and new compilers. Their immediate requirements are for two experienced Assembler Software programmers with relevant in-depth compiler writing experience. The more senior post is for a Project Manager and the second opening would ideally suit a senior systems programmer.
Whilst Assembler programming experience in a Mini computer environment is essential, any prior exposure to a high-level language would be beneficial.
Both positions offer exceptional prospects to develop within the Software development group of this very successful Computer Manufacturer. Several attractive fringe benefits accompany the above average salaries being offered. Interviews will be held in London during the first 2 weeks of November and prospective applicants should telephone Informatix for full details.

01-409 0468

IBM Operator / Shift Leader Surrey Minimum £3200

Candidates must be experienced on IBM DOS / GRASP and be educated to 'O' Level standard in Maths and English. The successful candidate will, after 2 or 3 months' training, be responsible for a shift of 1 other person initially. Multi-programming would be an advantage. A salary review will take place after three months. Ours involved include all normal S/L functions and liaison with bureau customers outside working hours.
Consultant: Selina Mills.

Sales Support Programmers & Analysts Edinburgh To £5500

Minimum 'A' Level qualifications will apply. Candidates will be car owners with current driving licence and show a good aptitude for client liaison. Ours will include feasibility studies, writing proposals on post sales consulting. Basically, you would advise and guide clients on new hardware ranges. Both Analysts and Programmers must have at least 2 years' COBOL or ALGOL programming experience.
Consultant: Selina Mills.

IBM 370 PL/1 Analysts/ Programmers Lancashire To £7000

Any experience of IMS would be especially welcomed. We have urgent, large scale requirements for a leading industrial group about to embark upon a major systems development exercise. Experience of working in a manufacturing industry would be advantageous. Staff will be expected to work in large project teams, involving tight schedule controls. Opportunities also exist for travelling throughout the U.K. to other group sites if required during latter 1978. Attractive salaries will be paid to a wide range of applications and software support staff with 2 years' and more practical experience.
Consultant: Neil Bradley.

ICL Project Leader SW London To £6500

Ideally, candidates will have New Range experience, but not essentially. Otherwise our client seeks good experience in a commercial environment on ICL 1900. The successful applicant will be capable of handling a project team during conversion of batch to ICL 2960 and be in charge of 4 analysts and 3 programmers.
Consultant: Don Walklate.

Systems Programmers Gambis To £6000

Both OS and DOS experienced staff are sought for detailed systems programming duties with an engineering group. Opportunities exist for additional database involvement.
Consultant: Don Walklate.

Leading Vacancies Middlesex To £6500

Project Leaders, Senior Analysts, Analysts, Program Designers, Chief Programmers and Programmers. Opportunities exist with a large group, substantially increasing their investment in modern, sophisticated hardware, for a wide range of experienced staff. Experience in the following areas is urgently required: Production Control, On-line/Real Time Systems, Database development, general commercial Accounting and Sales Order Processing, down to COBOL programming. Opportunities not to be missed in the Middlesex area.
Consultant: Selina Mills/Carol Proudman.

IBM Programmers Derby To £4500

Our clients require a number of additional Programmers and Analysts to work in small project teams split into 50% development, 50% maintenance. Projects generally are commercial batch work, Payroll, Accounts, Sales, Stores, etc. Language experience should be ASSEMBLER, COBOL or PL/1. Some on-line development is envisaged within the next 2 years.
Consultant: Selina Mills.

Systems Analysts West Midlands To £4400

Preference will be for candidates educated to at least HND level. The main activities of systems development include investigation of existing systems and assessment of future requirements. Preparation of initial reports and agreements with users. Preparation of individual program specifications including test data. Systems testing and Parallel/Pilot running and completion of time schedules which must be adhered to.
Consultant: John Wood.

ICL New Range Programmers South West & West Country To £7000

We urgently need staff experienced on New Range for a number of large users, including manufacturers and bureaux. Vacancies offer permanent employment or contract status, according to individual experience. Work functions include working on new application systems, developing new operating software, compiler design, emulation systems and a wide variety of technical and scientific functions. Attractive fringe benefits also exist with leading clients for contract staff.
Consultant: Neil Bradley.

Honeywell 2000 COBOL Programmers London To £6000

EMS urgently require 5 more experienced H2000 COBOL Programmers to work on distribution and accounting programs existing a very large U.K. user. A minimum 2 years' programming experience is desirable with at least 1 year on H2000. Attractive fringe benefits also available.
Consultant: Neil Bradley/Denis Filby.

IBM 370 PL/1 & Assembler South Midlands To £7000

Any experience of IMS would be especially welcomed. We have urgent, large-scale requirements for a leading industrial group about to embark upon a major systems development exercise. Experience of working in a manufacturing industry would be advantageous. Staff will be expected to work in large project teams, involving a tight schedule control. Opportunities also exist for travelling throughout the U.K. to other group sites if required during latter 1978. Attractive salaries will be paid to a wide range of applications and software support staff with 2 years' and more practical experience.
Consultant: Neil Bradley.

IBM Analyst Manchester To £4800

Good commercial experience in an IBM environment is sought. Ideally, applicants should have worked at least 2 years in a similar position. The group have an international clientele and supply engineering products to a large consumer market.
Consultant: Don Walklate.

IBM System 300S Programmer Holland

Candidates should be educated to at least 'A' level standard and be experienced in both COBOL or RPGII. Marketing and Finance knowledge is essential. The position is with a Dutch subsidiary of a major European group. Adequate relocation assistance will be given.
Consultant: John Wood.

ICL 1900 COBOL Programmers West Country To £5000

A small Gloucestershire bureau has vacancies for additional Programmers to assist with developing client accounts. Candidates will be given appropriate application training where necessary. Opportunities exist for both Junior and Senior staff working in a very popular location with good middle term career prospects.
Consultant: John Wood.

Business Analyst Staffs Analyst/Programmer Wilts £4000-£5500

Hardware preference will be for ICL COBOL in a manufacturing systems environment using on-line RJE. The Analyst/Programmer will be required to investigate and design minor projects either alone, or as part of a project team. Some programming will also be required. The position would suit a Programmer with 2 years' experience wishing to move into Systems Analysis. The Business Analyst will be responsible for all systems development within the Wiltshire area, reporting to the Chief Systems Analyst at Swindon. Applications will be broad but related to Engineering/Manufacturing in content, and are likely to be on-line to the Swindon mainframe via an RJE terminal.
Consultant: Don Walklate.

Top Hardware Salesmen Entire U.K. To £15000

Experienced hardware salesmen, accustomed to selling in excess of £500,000 worth of mainframes each year, are required to assist with market development by a leading international manufacturer. Our client in total has the widest range of products available and already is enjoying a substantial sales boom. Best markets currently exist for our client's products, throughout the U.K. Existing new products are adding substantially to marketing impact and assisting the group to increase penetration of competitors' accounts. Equally, with substantial package development support from a leading U.K. software house, sales during 1978 look very attractive in prospect. Numerous salesmen this year have been hitting record levels, some with multi-million pound accounts. Take advantage of these vacancies at an early stage.
Consultant: John Wood.

IBM Senior Ops, Ops Middx. To £4700

A minimum 18 months' experience is required with OS/VS1. Knowledge in 370 range. The company currently works a 3 shift system. Good progress prospects exist.
Consultant: Anne Lonnell.

Analysts, Chief Prog & Prog South Wales To £4500

Any major hardware or PDP experience will be adequate, preference being for Honeywell or ICL. Applications centre mainly around Financial, Manufacturing and Production Control and Payroll. Analysts will be expected to maintain some existing financial systems running in batch mode. Equally, you will be involved in new financial systems to be implemented on new equipment with on-line enquiry playing an important role. You will also be involved in modifying/implementing various packages in addition to specifying new system requirements. Specialist manufacturing Analysts will take responsibility for new manufacturing systems to be implemented on new equipment with on-line enquiry playing an important role. You will also be involved in modifying/implementing various packages in addition to specifying new system requirements. Specialist manufacturing Analysts will take responsibility for new manufacturing systems to be implemented on new equipment with on-line enquiry playing an important role. You will also be involved in modifying/implementing various packages in addition to specifying new system requirements.
Consultant: John Wood.

Operations Manager Herts To £5250

ICL 2903/4 experience would be particularly advantageous, as would some experience of Stock and Production Control Systems in a manufacturing organisation. Duties will include supervision of all staff in the computer room and data preparation. Also, you will be responsible for job scheduling, ordering and maintaining equipment media stocks, maintaining operator standards, ensuring that the manufacturer maintains his service commitments and be capable of operating the 2903 in the event of staff shortage.
Consultant: Selina Mills.

Systems Programmers Herts To £4500

We seek an experienced PL/1 Systems Programmer to work on IBM 370 using OS/VS POWER to maintain current software, write and test software to develop new systems, and when required, to migrate software packages, to monitor current industrial facilities of interest to the company and, to determine causes of computer software and hardware failures.
Consultant: Don Walklate.

6 IBM Programmers Norwich To £4500

Essentially, candidates will have IBM OS or DOS experience, a minimum 'A' Level qualifications and ASSEMBLER or COBOL. Equally, any CICS or DL/1 experience would be advantageous. Systems Programmers will support and maintain all systems software and libraries, apart from CICS. A CICS Programmer is required to write and test ASSEMBLER CICS programs in one of two project teams. Batch programmers will write, test and maintain batch ASSEMBLER programs.
Consultant: Don Walklate.

ICL COBOL/PLAN Programmers Yorkshire To £6000

Clients require a number of experienced Programmers to work on commercial and industrial applications systems. A knowledge of PLAN is required. Applications generally include Sales Order Processing, Personnel Ledgers, Process Control, Stock Control, etc. Equally, candidates with ICL COBOL bureau experience would be of special interest. Apply urgently for these leading positions and, if possible, come and discuss opportunities with us at Leeds on Friday, 4th November, 1977. See the first advert page for details.
Consultant: Niall Bradley.

Analyst & Senior Programmer IBM BAL/COBOL Durham To £4700

We seek a minimum 2 years' knowledge of IBM DOS, BAL or COBOL preferably OS/VS. Previous experience in a manufacturing environment would be advantageous. Relocation assistance will be supplied where appropriate.
Consultant: Selina Mills.

Systems Programmers, Systems Designers, Systems Engineers London To £5300

A large banking group have numerous vacancies for staff experienced in OS/VS, ASSEMBLER or COBOL and possibly CICS. A minimum 2 years' IBM 370 experience is essential. Equally, relevant staff with experience of financial system or banking would be of special interest. Excellent working conditions are available at a convenient City location.
Consultant: Selina Mills.

Hewlett Packard Systems Designers & Programmers North West To £7000

Candidates with experience of Distributed Processing in Production Control are urgently sought. A large manufacturing client will soon be developing an extensive manufacturing network to be system with substantial systems development to be undertaken. Experience of this equipment range will be essential for which attractive payment premiums will be negotiated.
Consultant: Neil Bradley.

Graduate Programmers Glasgow To £3800

Young candidates are sought with a minimum 2 years' programming experience in either ASSEMBLER, FORTRAN, ALGOL or PL/1. Programmers will work in a group bureau type environment as a centralised bureau service. Applications vary from commercial to Process Control. Second medium term career opportunities.
Consultant: Selina Mills.

IAL**Real-Time Programming...
with a difference****Programming Project Leader Analyst/Programmers**

The use of computer-aided dispatch is expanding fast in areas of activity where control of vehicles and resources is vital to efficient operation. IAL, with a 30 year history of involvement with communications world-wide, are supplying such systems in a variety of applications including police, other emergency services and public transport operations. Current activities cover UK and North America and further growth is planned in these and other areas.

In line with this growth, the Computer Systems Division now has vacancies for men and women at various levels within the programming team, to work on new projects based on single and multiple NOWA/Ethos systems. Applicants should have at least 1-2 years' experience of mini-computer FORTRAN. Assemblers in real-time programming. Any systems or engineering experience would be advantageous as would experience with Data General equipment. Graduate's preferred.

Good salaries and associated benefits are offered. The positions are based in West London (close to the M4 and Airport). Overseas travel for short periods is likely for which generous additional allowances are paid.

Opportunities are great, both in the field noted and also in other computer-orientated fields with which the Company is concerned, notably the use of minis/micros in data network control/management. The positions require a greater than normal degree of involvement and interest in all aspects of project implementation. They represent an opportunity to be fully involved in an exciting line of development with an enormous potential.

Please write or phone as soon as possible quoting Ref. 420 to Jack Smith, International Aeradio Limited, Aeradio House, Haver's Road, Southall, Middlesex. Tel: 01-571 6378/19/3.

**SENIOR
COBOL
PROGRAMMER****LONDON W1 £5,000+**

Looking for an opportunity to work on major systems (real-time and batch) in a database environment? The appointment offers:

- initial responsibilities on ICL 1900 applications
- subsequent retraining on ICL 2900 hardware/software — a large New Range configuration is due for delivery

This career opening is with a well-organised West End installation, with a substantial schedule of development work, on whose behalf we have been retained to recruit. It will interest ambitious programmers with upwards of two years' experience, including ICL COBOL and an advanced operating system.

For an initial confidential discussion, please ring in, quoting ref 829, or leave a message on our answering machine, after hours.

Tel: 01-637 5796

EDP Systems
52-53 Margaret Street
London W1N 7FF**PORTSMOUTH POLYTECHNIC**

Faculty of Engineering

Computer Programmer

Post No 639

Applications are invited from persons with experience of Algol and Fortran to work on a variety of Civil Engineering, construction management and data processing problems.

The Polytechnic ICL 4130 is currently being replaced by an ICL 2960 which will have terminals in the Department of Civil Engineering.

The Department also uses programmable desk calculators and the Engineering Faculty graphics system which is based on a P.O.P. 11 Computer and a plotter.

Salary Scale: T3/4, £2,922-£3,702 plus £473.7-£512.7 supplement.

Applications for the above posts available from Staff Office, Alexandra House, Museum Road, Portsmouth. Telephone Portsmouth 27881. Ext. 317. Closing date as soon as possible.

JBA**Data Base Consultants—****London Based**

One of the U.K.'s most respected software houses, well known for its data base work, wishes to recruit additional data base specialists.

They will be required to work upon a variety of client projects ranging from advising on the feasibility and implications of the data base approach to the detailed design and implementation of specific applications.

Senior Consultant—**Oil Industry £7-10K**

In addition to the qualities required by the consultant, the successful applicant must have a good general understanding of the industry and have had a secure role in the planning and implementation of major data base systems.

Consultant**£6-8K**

Wide computer and applications background with experience of the special analysis and design methods appropriate to the data base approach. Detailed software knowledge is not required but candidate must have worked with at least one of the proprietary data base management systems. Applicants must have the necessary personal qualities to successfully undertake projects for clients without detailed supervision.

Contact: Margaret Stevens

Programmers**Berks****to £5,000**

Our client needs ambitious programmers. Applicants with experience of CORAL (or Algol), ideally gained on minis/preferably Interdata, in a real-time environment are preferred although training will be given where applicable.

Positions offer excellent career opportunities and variety of work.

Contact: Margaret Stevens

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

**JAMES BAKER ASSOCIATES
International Personnel Consultants**

16 Maddox Street, London W.1. Tel: 01-491 4478

Australia

Approaching summer, very high standard of living, good salaries, and varied unparalleled opportunities must make Australia an attractive prospect at this time. If you are seriously considering a move, contact us for our free counsel and help in locating a good career situation.

Currently in urgent demand: Honeywell 6000 or Level 66 personnel; CICS expert; IBM COBOL Programmers.

Contact: Mike Creamer

Software Specialists**Home Counties****up to £8,000**

Our client, a leading European software house, has vacancies for specialists to develop a number of different software facilities.

Applicants must have several years' experience of operating systems, compilers, emulators on mainframes such as 360/370, and 1900's or mini-computers of the PDP11 or NOVA range. These are excellent opportunities to work on sophisticated systems in a professional and challenging environment.

Salaries negotiable according to experience.

Contact: Jim Baker

Technical Authors**Hertfordshire****up to £8,000**

A highly progressive company, engaged in the development of software and hardware products, urgently seek personnel to create modularised documentation for a varied audience. Positions are open to established Authors or Programmers with a desire or interest in this fascinating type of work.

Excellent relocation package, salaries, and working environment.

Contact: Mike Creamer

Systems Analyst

(Male or Female)

**Salary range: £5170 to £5536
including pay supplements**

located in the Computer Section at Nugent House for work involved with the development of a wide range of technical applications within the Authority, including large data on, lives and specific problem solving in all non financial areas of the Authority's business.

The successful applicant will have two or more years' experience as a Systems Analyst, and a knowledge of FORTRAN or ALGOL would be of advantage.

Excellent conditions of service apply including a flexitime scheme based on a 35 hour 5 day week plus generous sick leave and holiday entitlements. There is also a Staff Restaurant and a Social Club.

Applications should be made on forms available from the Divisional Manager at Nugent House, Western Road, Reading RG1 8BB. Telephone Reading 593331. Please quote reference E.11. Closing date 3 November, 1977.

Thames Water

Thames Conservancy Division

**Systems
Project Leader**

With potential for promotion to Project Co-ordinator.

To join a big company with major projects and, therefore, the prospect of varied and interesting work which will broaden your skills and experience in a short time.

IBM/DOS essential; COBOL desirable; with experience in a manufacturing operation.

Age 25-30. Starting salary c £5250. Free lunches. Excellent relocation assistance. Very pleasant South-West coast town.

GALLAHER (DUBLIN) LIMITED

have vacancies for

DATA PROCESSING PERSONNEL

Gallagher (Dublin) Limited, situated at Tallaght in a south-western suburb of Dublin is part of a major international company, engaged in the manufacturing and marketing of tobacco products including such well known brands as BENSON & HEDGES, SILK CUT, MELLOW VIRGINIA, HAMLET, etc. We have recently upgraded our Data Processing facilities to a HONEYWELL 62/60 mainframe with 192K memory, 87 MB Disk Storage and 400 LPM Printer using GCOS and TRANSACTION PROCESSING through VDU's. We now wish to expand our D.P. Staff and require the following personnel.

SYSTEMS ANALYST

Ideally, candidates should have a professional qualification or a degree equivalent preferably related to Computer Science, Mathematics or related areas. Significant D.P. experience may be acceptable. Applicants should have good analysis experience coupled with a COBOL programming background. They must be able to demonstrate that they have played a senior role in the design and implementation of at least one major system.

Reporting to the Data Processing Manager, the Analyst will assume responsibility for all phases of new systems and the further development of existing systems.

CONSOLE OPERATOR

The Console Operator will have the responsibility for the operation of the Honeywell 62/60 mainframe, reporting to the Operations Supervisor.

Essential qualifications are an aptitude for figures and the ability to work on own initiative so as to meet scheduled deadlines for completed work. The successful candidate will have a Leaving Certificate, or equivalent, including high grades in English and Mathematics and at least two honours. Training will be provided.

Salary and fringe benefits are attractive. Applicants should, in the first instance, send a detailed curriculum vitae to:-

The Personnel Manager,
Gallagher (Dublin) Limited,
Virginia House,
Greenhills Road,
Tallaght,
CO, DUBLIN.

to arrive not later than Friday,
November 1977.

**Systems
Analysts
London**

Have you experience in commercial computer systems design, or are you a Senior Programmer with ambitions to become a Systems Analyst? If so we can offer you the opportunity to join our group of young professionals in a rapidly expanding computer department at Courage, one of the big six in the beer, wine and spirits business.

We have just moved to our new data processing centre designed to cope with our current and future expansion. We have at present two ICL 1903T's, using MAXIMOP

and George II+ and are now considering our future hardware requirements. Our development plans include the implementation of on-line order processing, management information and several accounting systems.

If you are interested in advancing your career with us, please write with brief details of career to date, or telephone for an application form, to Roy Spence, Courage DP Department, Mansfield House, 335 Western Avenue, Acton W3, Telephone 01-992 5591.

**Courage****DP Department**

Programming Manager

Salary: C.£7,250 p.a. + Mortgage subsidy, excellent fringe benefits.

Location: South Coast of England.

This is a completely new position and requires someone with considerable experience in the programming area. Our client, the Card Division of American Express, is a large IBM user and has a programming group of about 20 programmers. They wish to meet someone to take charge of this group. The successful candidate will have a comprehensive programming background, as the range of applications vary from a large IBM mainframe to mini-computers. The person selected will be capable of maintaining Technical Interface with System Development and Computer Operations.

We imagine the successful candidate is probably now

working as a Project Manager or Chief Programmer with a Software House, a Computer Service Bureau or a large user, and is looking for an opportunity, which this position certainly offers, to develop his or her career in a progressive environment. The planned expansion within our client's institution during the next two years is significant. Because of this the challenge will be formidable. Accordingly a minimum of 5 years' programming experience is required. A "self-starter" who believes he or she has the necessary drive, both in management and technical skills will welcome the opportunity offered.

Please contact John Goldsmith, quoting Ref. 885 CW/.

TIMESHARING in AMERSHAM

with a newly formed bureau company backed by a major international group

BUNZL DATA SYSTEMS was formed in July of this year as an independent subsidiary of the large Bunzl International group. It runs a timesharing division based on PDP 11/70 and 4 x PDP 11/35 machines selling commercial applications facilities covering financial, order processing and production planning applications. Originating as an in-house-only department 3 years ago, the company is now embarking on an ambitious and aggressive programme to market its services to outside users. Already growth plans are becoming reality and consequently additional staff are required.

SOFTWARE MANAGER

c £8000 p.a. + Car + Benefits

Reporting to the Divisional Director, this person will be responsible for all the applications software development by the company. This will involve managing a team of circa 12 Programmers and Analysts, split between Amersham and the City. Naturally, the incumbent will play an important part in decision making on the company's hardware and software development policies.

As potential director material, you should be aged 30-35, a sound technician (preferably DEC based) and able to manage a young and highly skilled team on a profit conscious basis. Acting in a sales/customer support role, your team will develop tailor made software as well as install and modify packages. This post is seen as a key appointment, vitally important in the company's development.

RW 43/1

PROGRAMMERS and ANALYST/PROGRAMMERS

£4500 p.a. to £6500 p.a.

BASIC + on real time PDP applications

Bunzl has so much to offer at this moment in time:—

- ★ Career development through rapid expansion
- ★ Highly marketable experience on PDP and real time applications
- ★ Excellent training
- ★ Hands on machine time
- ★ Customer Contact
- ★ Attractive working conditions and location
- ★ Financial stability through parent company

Whether you are currently commercially or scientifically based, all you need is a minimum of 1 year for Programmer and 4 years for Analyst/Programmer of good experience including high level languages. Naturally, DEC experience is advantageous. You will work in attractive rural offices and enjoy 20 working days holiday, subsidised canteen, L.V.'s, BUPA and social club.

RW 43/2

SOFTWARE DEVELOPMENT IN ARIZONA USA

§ Excellent package
Initially 12-month contract
Subsequent permanent employment possible

Our clients are a highly respected, medium sized US computer consultancy. They wish to recruit experienced software professionals to undertake projects for one of the world's major corporations.

If you have expertise in
Operating Systems
Database Software
Compilers
Language Development
Software Facilities
Etc.

then we wish to hear from you. Initial employment is on a 12-month contract, however, there is every possibility of continuation on a permanent basis. The site is an extremely attractive location in a relatively inexpensive area of the US, much sought-after by DP professionals.

CONTACT US NOW AS OUR CLIENTS WILL BE IN THE UK IN THE VERY NEAR FUTURE.

SYSTEMS ANALYSTS LONDON

**to £7500 p.a. + Mortgage
+ Bonus + Attractive benefits**

Major US Bank developing IBM and PDP based systems.
Two really top quality Analysts are required by this leading Bank.

They will:

- (i) Investigate a business area and determine a business systems definition
- (ii) Undertake the detailed design of the system
- (iii) Be involved in the development and implementation

Projects are aimed at timescales of 6 months to one year and the Analyst, actively participating in all phases of the development cycle, has considerable responsibility for successful implementation.

As a young, thorough professional (age circa 28), you will be demanding in your approach to work and career development. During the next five years you will have every opportunity to meet these demands. The London branch's computer department is undertaking a complete re-write of its banking systems and developing an International Overseas Network based on PDP kit.

The only really essential requirements are intelligence and sheer professionalism; if you have PDP or banking experience all the better.

RW 43/4

ata Computer Recruitment

A division of ATA Selection and Management Services, recruitment consultants to Industry and Commerce since 1962.

WHY COMMUTE TO LONDON? WE HAVE OPPORTUNITIES IN SUSSEX FOR YOUNG GRADUATES

OUR CLIENT, A MAJOR ENGINEERING FACTOR, CAN OFFER YOU **JOB SATISFACTION** AND **REAL CAREER ADVANCEMENT** IN A VARIETY OF COMPUTER-BASED VACANCIES

ANALYST/PROGRAMMERS

c £5,500 p.a.

You should have a minimum of 2 years' good experience of programming in COBOL or FORTRAN and 1 year of systems analysis. Experience on PDP 11 with RSX/11M preferred. You will be working with either a line management information system or an engineering data base.

USER SUPPORT CO-ORDINATORS

c £3,350 p.a.

Initially you will be helping to install advanced methods of Production and Inventory Control and have a career path leading into industrial management.

SYSTEM ENGINEER/PROGRAMMER

c £5,000 p.a.

You will be involved in an expansion programme concerning further applications of the DEC mini/micro computer range. You will be designing and writing programmes in ASSEMBLER and High Level languages such as CORAL 86 and have experience in RSX/11 operating systems.

GRADUATE ENGINEER

£3,300 to £4,500 p.a.

You will join a team developing Computer Aided Design and Interactive graphics applications. A powerful Prime 400 mini computer supports twenty work stations for use by engineers and draughtsmen. Perhaps you have been doing research in engineering and want to move into an advanced computing environment.

For further details telephone our Crawley office 0293 514071 or your nearest ATA branch.

EUROLOGIC

A Member of the Wellgate Group

Swiss-based South American Travel Opportunities Real-time Software for Process Control Software Specialists to £15,000

We have been retained by our client, a rapidly growing and outstanding professional organisation, involved with the control and supervision of Electrical Distribution Networks, to recruit software specialists.

Based in Switzerland, successful candidates will be required to take full responsibility for all stages of development, from analysis through to implementation. Broadly speaking, we are looking for candidates in two main categories, one concentrating on establishing new standard software packages and requiring a background in computer science, modern real-time software, Databases and technology.

The second category calls for direct experience of project implementation and will include travel to South America, Middle East and other parts of the world for commissioning purposes.

General background experience should include a degree, direct experience of process control, a knowledge of ASSEMBLER and other high level languages, preferably CORAL and FORTRAN. Familiarity with PDP, RSX11 operating systems will be advantageous. Successful candidates will be encouraged to take project responsibility and management opportunities will exist for those with relative potential.

Remuneration will be high for the right applicants and will be totally consistent with local standards.

Interviews will be held in London on the week beginning November 21st.

Please contact John De La Mere for further information

Division

Standard Telephones and Cables Limited
A British Company of I.T.T.

Customer Service Engineers Minicomputers

Southern Counties up to £5,800 + car

Continued expansion of our product range has created a number of openings in our Minicomputer Service Department. We would like to hear from Engineers with experience in the use and maintenance of minicomputers and peripherals and ideally with experience of D.E.C. PDP-11 and PDP-8. The appointments are based in Surrey at our 'Inworth Service Centre'. Candidates, male or female, should preferably be HNC standard, must be capable of working without supervision and able to communicate at all levels. Salary will be up to £5,800 depending on experience and a company car will be provided. Excellent conditions of employment including BUPA membership plus assistance with relocation expenses where appropriate. Please telephone or write for an application form to Mrs J. S. Edrich, Personnel Officer, Plessey Memories, Water Lane, Fawceter, Northants. Tel: Fawceter (0327) 51515.

PLESSEY

Lecturers/ Senior Lecturers Computing Science

Applications are invited for the above posts from candidates with a degree or professional qualification and/or extensive experience in one or more of the following areas: Systems Analysis and Design, Computational Programming and Data Processing, MIS, Computer Graphics, Computer Education in Secondary Schools, Computer Assisted Instruction, Systems Programming and the application of computers to all disciplines taught at the Polytechnic, a B Engineering, Mathematics, Teaching, Design and Commercial subjects.

The appointee will be required to teach on courses of their specialism as well as general courses offered by the Department. The development of short courses to computer professionals is important and experience in this area would be an advantage as would experience in developing educational curricula.

SALARIES
Lecturer HK £40,920-£73,880 by 11 increments
Senior Lecturer HK £44,480-£100,380 by 6 increments
Starting salary: HK \$8,300-£1 to £4,530 (€ 913) and £8,711 (€1,094) respectively

Appointments on 2 year contracts bearing contractually transferable suitable appointments may be offered further contracts on superannuation terms at the discretion of the Polytechnic.

Free passage long leave substantial accommodation medical and dental treatment, education allowances and a terminal gratuity equal to 25% of basic salary received over entire contract period.

Applications form and further details from the Recruitment Unit, FEIOC (Technical Education and Training Organisation for Overseas Countries) 25, 17, Grosvenor Gardens, London, SW1W 0BS. Tel: 01-473 0100.

Closing date for receipt of applications 14 November 1977

Tetoc

Share in the future of Britain's Gas

SENIOR COMPUTER OPERATOR CROYDON

Commencing salary, including shift allowance, within the range £4,021 to £4,859 per annum.

SEGAS have a vacancy for a Senior Computer Operator with 2 to 4 years' experience of IBM 380/370 hardware running under OS and/or VS operating systems.

Our present installation comprises a 1.0mb 370/145 and a 0.5mb Honeywell H4200 operating on a 3 x 8 hour shift/5 days week basis. A 2mb 370/148 is due for installation in November of this year. We undertake a wide variety of both batch and on-line applications and currently have about 150 remote VOLTs installed throughout the Region. IBM software in use includes OS/VS1, VM/370, CMS, VTAM/NCP, CICS and ATMS.

The salary quoted includes London Weighting (where appropriate) plus 1978 and 1977 salary supplements.

- * Good working conditions.
- * Generous holidays.
- * Sick pay, pension and insurance schemes.
- * Sports and social facilities.

Write giving full details, within 7 days, and quoting Ref. F3767 to:

Personnel Manager, SEGAS, Segas House, Katherine Street, Croydon CR9 1JU.

Under normal circumstances applicants will be informed of the outcome of their application within two weeks.

SEGAS

H.P.S.L. FREELANCE PROGRAMMERS

IBM, COBOL, OS/VS with CICS experience and IBM PL/I, OS/VS

Required for 6 months plus contracts on the south coast

H.P.S.L. 01-388 1827

Programmers & Analysts

London-£3,500 to £6,000 p.a.

What's it worth . . .

To work for the admitted world leader in its product range holding four Queen's Awards to industry and £100 million group turnover.

To contribute to the production of very complex precision engineered products each of bespoke design.

To enhance an already established IBM 370 installation in database, teleprocessing and distributed intelligence facilities.

To know that success is rewarded with career progression carrying right through the data processing function; also opportunities into general management.

To have evidence that the programme of development tasks extends well into the future with a total company commitment to computer working.

To be a member of a team of computer professionals working on a wide variety of projects across production, engineering and commercial type systems.

at least a telephone call or brief written particulars of your education and experience, to me: H. N. Wilkinson, Management Services Manager, Molins Limited, 2 Evelyn Street, London SE8 5DH. Telephone: 01-237 4681

MOLINS
International Precision Engineers

FORTRAN Analyst/ Programmer

LONDON W1 c £6,000

This appointment offers:

- responsibility for two large FORTRAN systems of a novel, complex and interesting nature, including detailed specifications, programming, testing and documentation
- liaison with user departments, computer operations and analysts on linked projects
- analysis work on systems for ICL 1900/2900, both real-time and batch, with some database applications (IDMS).

Candidates should have:

- extensive FORTRAN knowledge, ideally on both ICL and IBM equipment
- statistical experience and formal training
- willingness to work on non-statistical applications

We have been retained to recruit for this post on behalf of clients, a major West End installation. Please ring us for a confidential initial discussion, or leave a message on our answering machine after hours, quoting ref. no. 779.

SYSTEMS ANALYST c. £6,500 + car

The rapid expansion of the fork truck hire business of Lex Service Group gives rise to the need to appoint a systems analyst to develop data processing and management information systems in the Group. Lex, through its subsidiary Harvey Plant Ltd. operate 5,000 fork lift trucks from 35 depots throughout the UK. They require an experienced data processing professional to design and implement a management information system that would incorporate data on individual fork truck profitability, performance, reliability, and application.

In addition to this primary requirement, the Group is developing data processing systems to improve its operating efficiency, predominantly in the accounting area.

The successful candidate, male or female, for this appointment will have had several years' experience in implementing data processing systems in an industrial environment. It is essential that he/she has been involved in the development, implementation and use of a genuine management information system.

Opportunities for promotion within both Harvey and Lex are excellent.

Prize benefits include 5 weeks holiday, non-contributory pension scheme, and assistance with relocation costs.

Write or telephone for an application form to M. G. Williamson, Lex Hire and Leasing, Lower Glory Mill, Woodbury Green, High Wycombe, Bucks. Tel: Bourne End 34942.

BOOKS

Laudable aim unfulfilled

Information and Data in Systems, by Borge Langefors and Kjell Smuelsen, 117pp, £10.50. Petrocelli/Charter, available through Input Two-Nine, 7 Banstead Road, Purley, Surrey.

"THE purpose of this book is to provide an introduction to an elementary understanding of data as the means of representing information." This is the opening sentence — did you follow it? It describes a very laudable aim — it's a pity that it fails to achieve it.

The authors, both professors at Stockholm University, assume a considerable amount of specialised knowledge from their readers. If these readers have the required knowledge they don't need to read the book. Indeed, with the proper encouragement, the reader capable of following the text should be able to produce a better, shorter and more accurate monograph on the subject for himself. But why senior academics on the Duke of Wellington's noted epigram — publish or be damned!

Database theory is the name of the game, and the promotional material is confined to slake this voracious market appetite. However, the subject is adequately and more comprehensively covered in the standard textbooks. This book doesn't even provide a useful adjunct — quite the opposite, because it confuses standard terminology. The term "schema" is used interchangeably with "algorithm"; tasks, jobs, pro-

grams and processes are not explained and differentiated — or even mentioned.

A good background in maths is a prerequisite, as some of the expressions become fairly complex — so much so that the authors sometimes trip over their arithmetic to get to the "well-known" Bayes' theorem or theory of posterior probability.

A contentious argument is handed over as a basic axiom, with a rather bald justifying statement, "natural language is extremely difficult for automata to understand except for 'trivial office routines'". This will dismay many designers of natural language processing systems, and cause much ribald laughter from the fraternity who use English as a data management language on CMC/Microdata equipment.

Perhaps these are the people who are doing the trivial office routines, so are of no consequence to academics on the Duke of Wellington's noted epigram — publish or be damned!

There is a short discussion of data retrieval principles, but no helpful consideration is given to the subject of evaluating the many alternative techniques. It is no use looking in here if the reader wants practical advice with real system design problems.

Exercises? Plenty. But the reader is treated as an idiot. For example, "List all possible physical obstacles that might cause trouble during a walk to a bus station".

SEAN O'CONNELL

First-class for the novice

Survey and Opinion Research: Procedures for Processing and Analysing, by John A. Sonquist and William C. Dunkelberg, 502pp, £15.95, Prentice-Hall.

clearly not a book based on a pre-computer text with cosmetic sections added in later editions. Typically a text that will explain the statistical techniques, then throw in an odd remark about missing data and then a few paragraphs about computers. In this case, the long chapter on statistics (120pp) starts with 30 pages on the basic ideas underlying statistical programs, and goes on to discuss subjects such as missing data before talking about regression. Well done, Sonquist and Dunkelberg.

Envy and a little boredom were my main emotions in this case. Envy the authors their persistence and industry in compiling a book as sensible, comprehensive and thorough as this (and the opportunity). Yet I cannot say I found it interesting to read, not because I know it all (I don't) but because the presentation is so earnest and unlightened by wit or elegance.

So what this book is not a good introduction to the subject for the non-specialist. It is, however, a first-class book to accompany a course or for reference by the novice practitioner.

The book covers data structures, editing, coding, data quality control, variable generation, statistical analysis and survey administration. It keeps its objects in view all the time, and it is built round the use of a

There is only one satisfactory method of handling such a situation. Take the pressure off the man by telling him you understand his problem and feel it would be better for both of you if your meeting were rescheduled, and that you consequently do not need to take up even the small but precious amount of time he has courteously allocated to you. Simply make another appointment for the soonest convenient date for both of you.

He will not only be grateful for your consideration, but will also remember your good manners and professionalism on your subsequent meeting, thus ensuring an empathetic business environment as opposed to the absolute stiltedness of the alternative situation.

THE SALES BIT

Time to call again!

A CLASSIC sales situation is the one where you arrive promptly at the appointed hour only to be told that urgent and unforeseen circumstances necessitate the client sparing you only a few minutes before rushing off to a board meeting or some other high pressure gathering.

Now that is both unfortunate and unfair! There you are, with your early appointment, your planned call, all wound up and ready to go, only to have the carpet pulled from under your feet.

The immediate temptation is to give a brief synopsis of all the points you wish to cover or alternatively attempt to discuss in detail one aspect of your presentation and leave the rest.

Never be drawn into one of these psychological traps!

In effect the client has already left you! He is almost certainly mentally enmeshed with whatever situation has created the need for his urgent meeting, and your dialogue serves only as a distraction from his immediate problem and is thus a source of aggravation.

One cannot possibly sell anything in that environment. What is more, a summarised sales call will probably destroy the justification of any unexpurgated repeat performance at a later date.

There is only one satisfactory method of handling such a situation. Take the pressure off the man by telling him you understand his problem and feel it would be better for both of you if your meeting were rescheduled, and that you consequently do not need to take up even the small but precious amount of time he has courteously allocated to you. Simply make another appointment for the soonest convenient date for both of you.

He will not only be grateful for your consideration, but will also remember your good manners and professionalism on your subsequent meeting, thus ensuring an empathetic business environment as opposed to the absolute stiltedness of the alternative situation.
